Explanatory notes

This appendix defines the grouped codes used in the analysis of BEACH data in *General practice in Australia, health priorities and policies 1998 to 2008*. This appendix refers to the data coded using the ICPC-2 PLUS terminology (i.e. patient reasons for encounter, problems managed, clinical treatments, procedural treatments, referrals and investigations ordered) and classified according to the International Classification of Primary Care-Version 2 (ICPC-2) (see Chapter 2, Methods).

Within each chapter of this report data coded using ICPC-2 and the Plus terminology are analysed using groups of codes. These groups include:

- standard ICPC-2 classification – ICPC-2 chapter level and ICPC-2 rubrics. These standard classification groups are defined elsewhere and are not listed in this appendix. The general structure of ICPC-2 is described in Chapter 2 of this report. Further information about the ICPC-2 chapter structure and rubrics can be found at <http://www.fmrc.org.au/classifi-i.htm>
- standard groups of codes used in the BEACH annual reports. These are listed in Table A3.1 and include ICPC-2 and/or ICPC-2 PLUS code groups.
- non-standard grouped codes used in a specific chapter. Each chapter using non-standard code groups has a table (tables A3.2–A3.12) listing codes used in these groups.

If a concept is listed in both Table A3.1 and a chapter-based table (tables A3.2–A3.12) the reader should regard the chapter-based table as correct for that chapter only.

Where a group includes an ICPC -2 code and its rubric, this means that all Plus terms classified in that ICPC-2 code are included in the group. Where a group includes only some parts of an ICPC-2 code, each of the Plus terms included in the group are listed individually.
