Notes

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions
- This table excludes young people with unknown age.

Note

1. The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions.
2. This table excludes young people with unknown age.

Note: Queensland JJ NMDS data records 'Released on bail' as a reason for exit only for pre-sentence episodes that are followed by a period of conditional bail. For this reason, frequencies for 'Released on bail' for Queensland should be considered a significant underestimate of actual exits to periods of bail.

Notes

1. Age (in years) calculated as at entry to *episode*.
2. Queensland JJ NMDS data records 'Released on bail' as a reason for exit only for pre-sentence *episodes* that are followed by a period of conditional bail. For this reason, frequencies for 'Released on bail' for Queensland should be considered a significant underestimate of actual exits to periods of bail.

Notes

1. Transferred does not include transfers from one detention centre to another within a jurisdiction in the same supervision period.
2. Some reasons for exit may be due to the result of an appeal.
3. Queensland JJ NMDS data records 'Released on bail' as a reason for exit only for pre-sentence episodes that are followed by a period of conditional bail. For this reason, frequencies for 'Released on bail' for Queensland should be considered a significant underestimate of actual exits to periods of bail.

Note

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions
- This table excludes young people with unknown age.

Note

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions
- This table excludes young people with unknown age.

Note

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions
- This table excludes young people with unknown age.

Note

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions.
- This table excludes young people with unknown age.

Notes

1. Age (in years) calculated as at entry to episode.
2. Episodes that began before 1 July 2000 are excluded from this table.
3. In this table, contiguous detention *episodes* of the same type that are separated by a transfer within detention are considered to be one *episode* and their length summed.
4. The use of the episode hierarchy may shorten or hide *episodes* that are lower on the hierarchy.
5. Cells are not published (n.p.) where N<5.

Note

- The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The (number of supervision periods) experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions
- This table excludes young people with unknown age.
