Appendix B: State and territory perinatal reports

Individual state and territory health authorities publish reports based on their state or territory perinatal collection either annually or periodically. For the 2003 data, the following state and territory reports have been published:

**New South Wales**

**Victoria**

**Queensland**

**Western Australia**

**South Australia**

**Tasmania**
Appendix C: Data collection contacts

State and territory perinatal data

New South Wales
Dr Lee Taylor
Manager, Surveillance Methods
Centre for Epidemiology and Research
NSW Department of Health
Locked Bag No. 961
North Sydney NSW 2059
Phone: 02 9391 9223
Fax: 02 9391 9232
Email: ltayl@doh.health.nsw.gov.au

Victoria
Ms Odette Taylor
Health Information Manager
Perinatal Data Collection Unit
Department of Human Services
7/589 Collins Street
Melbourne Vic 3000
Phone: 03 9616 2692
Fax: 03 9616 2700
Email: odette.taylor@dhs.vic.gov.au
Queensland
Ms Sue Cornes
Data Services Manager
Health Information Centre, Data Services Unit
Queensland Department of Health
GPO Box 48
Brisbane Qld 4001
Phone: 07 3234 0889
Fax: 07 3234 0564
Email: suzanne_cornes@health.qld.gov.au

Western Australia
Ms Vivien Gee
Manager, Maternal and Child Health Unit
Health Data Collections, Information Collection and Management
Department of Health, Western Australia
189 Royal Street
East Perth WA 6004
Phone: 08 9222 4262
Fax: 08 9222 4236
Email: vivien.gee@health.wa.gov.au
Tasmania
Mr Peter Mansfield
Manager, Clinical Data Services
Hospitals and Ambulance Service
Department of Health and Human Services
Level 2, 10 Murray Street
Hobart Tas 7000
Phone: 03 6233 2173
Fax: 03 6233 3550
Email: peter.mansfield@dhhs.tas.gov.au

Australian Capital Territory
Ms Maureen Bourne
Data Manager
Population Health Research Centre
Population Health, ACT Health
Building 5, Level 1
The Canberra Hospital
PO Box 11
Woden ACT 2606
Phone: 02 6205 2612
Fax: 02 6244 4138
Email: maureen.bourne@act.gov.au

Northern Territory
Ms Margaret Stewart
Business analyst, Perinatal data
Department of Health and Community Services
Building 6, Royal Darwin Hospital
PO Box 41326
Casuarina NT 0810
Phone: 08 8922 7779
Fax: 08 8922 7787

n.a. Not available

n.p. Not published
Glossary

**Antepartum fetal death:** fetal death occurring before the onset of labour.

**Apgar score:** numerical score used to indicate the baby’s condition at 1 minute and 5 minutes after birth.

**Assisted vaginal/instrumental delivery:** vaginal delivery using forceps or vacuum extraction.

**Augmentation of labour:** intervention after the onset of labour to assist the progress of labour.

**Baby’s length of stay:** number of days between date of birth and date of separation from the hospital of birth (calculated by subtracting the date of birth from the date of separation).

**Birth status:** status of the baby immediately after birth.

**Birthweight:** the first weight of the baby (stillborn or liveborn) obtained after birth (usually measured to the nearest 5 grams and obtained within one hour of birth).

**Caesarean section:** operative birth through an abdominal incision.

**Early neonatal death:** death of a liveborn baby within seven days of birth.

**Epidural:** injection of anaesthetic agent into the epidural space of the spinal cord.

**Episiotomy:** an incision of the perineum and vagina to enlarge the vulval orifice.

**Extremely low birthweight:** birthweight of less than 1,000 grams.

**Fetal death (stillbirth):** death prior to the complete expulsion or extraction from its mother of a product of conception of 20 or more completed weeks of gestation or of 400 grams or more birthweight. The death is indicated by the fact that after such separation the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

**Forceps:** assisted birth using a metallic obstetric instrument.

**Gestational age:** the duration of pregnancy in completed weeks calculated from the date of the first day of a woman’s last menstrual period and her baby’s date of birth, or via ultrasound, or derived from clinical assessment during pregnancy or from examination of the baby after birth.

**Grand multipara:** pregnant woman who has had four or more previous pregnancies resulting in a live birth or stillbirth.

**Induction of labour:** intervention to stimulate the onset of labour.

**Intrapartum fetal death:** fetal death occurring during labour.

**Late neonatal death:** death of a liveborn baby after seven completed days and before 28 completed days.

**Live birth:** the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy, which, after such separation, breathe or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered liveborn (WHO definition).

**Low birthweight:** birthweight of less than 2,500 grams.
Maternal age: mother’s age at the birth of her baby.

Mode of separation: status at separation of patient (discharge/transfer/death) and place to which patient is released (where applicable).

Mother’s length of stay: number of days between admission date (during the admission resulting in a birth) and separation date (from the hospital where birth occurred). The interval is calculated by subtracting the date of admission from the date of separation.

Multipara: pregnant woman who has had at least one previous pregnancy resulting in a live birth or stillbirth.

Neonatal care levels: Level I care is for normal healthy term babies, some of whom may need short-term observation during the first few hours of life. Level II refers to a nursery that generally has babies born at 32–36 weeks gestation weighing around 1,500 to 2,500 grams at birth. It includes care for babies who require intravenous therapy or antibiotics, and/or those who are convalescing after intensive care, and/or those who need their heart rate or breathing monitored, and/or those who need short-term oxygen therapy.

Level III or intensive care refers to the care of newborn infants who require more specialised care and treatment. It includes most babies born at less than 32 weeks gestation or less than 1,500 grams birthweight, and others who may require such interventions as intravenous feeding, and/or surgery, and/or cardiopulmonary monitoring for management of apnoea or seizures, and/or require assisted ventilation, and/or supplemental oxygen over 40% or long-term oxygen (Donoghue 2004).

Neonatal death: death of a liveborn baby within 28 days of birth.

Neonatal morbidity: any condition or disease of the baby diagnosed after birth and before separation from care.

Parity: number of previous pregnancies resulting in live births or stillbirths.

Perinatal death: a fetal or neonatal death of at least 20 weeks gestation or at least 400 grams birthweight.

Perineal status: status of the perineum after the birth. May involve surgical suturing of perineal laceration or episiotomy incision.

Plurality: the number of births resulting from a pregnancy.

Postneonatal death: death of a liveborn baby after 28 days and within one year of birth.

Post-term birth: birth at 42 or more completed weeks of gestation.

Presentation at birth: presenting part of the fetus at birth.

Preterm birth: birth before 37 completed weeks of gestation.

Primipara: pregnant woman who has had no previous pregnancy resulting in a live birth or stillbirth.

Resuscitation of baby: active measures taken shortly after birth to assist the baby’s ventilation and heartbeat, or to treat depressed respiratory effort and to correct metabolic disturbances.

Spontaneous vaginal: birth without intervention in which the baby’s head is the presenting part.

Stillbirth: see Fetal death.

Teenage mother: mother aged less than 20 years at the birth of her baby.
**Vacuum extraction:** assisted birth using a suction cap applied to the baby’s head.

**Vaginal breech:** vaginal birth in which the baby’s buttocks or lower limbs are the presenting parts.

**Very low birthweight:** birthweight of less than 1,500 grams.
