

Time patients spent in emergency departments in 2012 and 2013

Information in this report was updated in November 2016, see www.myhospitals.gov.au

This report presents the percentage of patients leaving emergency departments within four hours of arrival across 112 public hospitals.

In 2013, there were almost 7 million patient presentations to emergency departments (EDs) around Australia. At major metropolitan hospitals, which accounted for 44% of patient presentations across all hospitals in 2013, average performance for this peer group (peer performance) has increased steadily. In October–December 2011, 53% of patients who presented at these hospital EDs departed within four hours; this increased to 66% in October–December 2013 (Figure 1).

Improvements are particularly evident among the lowest-performing major metropolitan hospitals. Among these hospitals, 35% of patients departed ED within four hours in October–December 2011, which increased to 51% in October–December 2013. The highest-performing hospitals have also improved since 2011. At major regional hospitals, which accounted for 16% of patient presentations in 2013, peer performance has been relatively consistent in recent years.

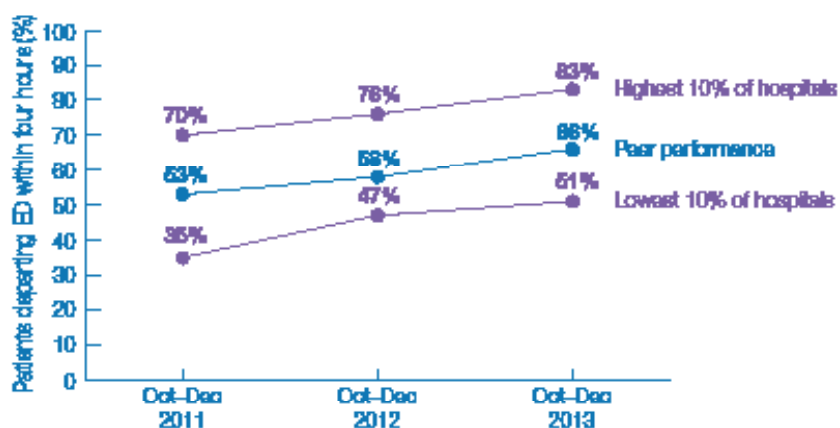

In the most recent reporting quarter (October–December 2013), peer performance was similar at major metropolitan (66%) and major regional hospitals (70%). There was also marked variation in the percentage of patients departing ED at hospital level within each of these peer groups (Figures 3 and 4).

Report highlights

- The latest available information on the time patients spent in ED at 112 of Australia's major and large hospitals
- Quarterly data are presented at hospital level for 52 major metropolitan and 27 major regional hospitals across five quarters (Figures 3 and 4)
- Data include the addition of three new quarters: April–June 2013, July–September 2013, and October–December 2013
- Annual data are presented at hospital level for 79 major and 33 large hospitals by state and territory in 2012 and 2013 (Tables 2 to 9).

Figure 1: Performance trends for major metropolitan hospitals, Oct–Dec 2011 to Oct–Dec 2013

MyHospitals

For further information on the time patients spent in ED at 112 major and large hospitals and data for an additional 174 hospitals, including specialist and children's hospitals, visit www.myhospitals.gov.au

Background and measure overview

This report highlights the extent to which patients depart public hospital EDs within four hours of arrival. This is measured as the percentage of patients who, after attending an ED, are subsequently admitted to the hospital, referred to another hospital or discharged within four hours. This is not a measure of waiting times for treatment, which refers to the period of time from arrival at hospital to the start of treatment (Figure 2).

This update includes data from 112 of Australia's major and large public hospitals, representing 76% of the 7 million patient presentations across Australia in 2013. These hospitals were placed in one of four peer groups based on their size and geographical location: major metropolitan, major regional, large metropolitan and large regional.

The information in this report is intended to help health care professionals compare their hospital against similar hospitals in the context of national standards and support the sharing of effective practices to manage the time patients spend in ED.

The National Emergency Access Target

The National Emergency Access Target (NEAT) was agreed by the Council of Australian Governments (COAG) in 2011. Regular reporting against NEAT highlights the performance of public hospitals and their EDs.

The states and territories have varying annual targets for the percentage of patients to leave an ED within four hours of arrival. In 2013, the target ranges from 65% in the Australian Capital Territory to 81% in Western Australia. By the end of 2015, 90% of patients across hospital EDs nationally should depart within four hours of arrival (Table 1).

The target was not set at 100% as, in some circumstances, it is clinically appropriate for patients to stay in ED beyond four hours.

Figure 2: Measurement of time patients spend in emergency departments

Table 1: State and territory National Emergency Access Targets* for the percentage of all patients departing ED within four hours of arrival, 2012–2015

MyHospitals

Visit www.myhospitals.gov.au to see how your hospital is performing. Search by geographic location or by hospital name to see hospital profiles and comparable performance results.

On this interactive website you can view the latest performance information for more than 1,000 public and private hospitals throughout Australia.

See performance information for measures such as:

- Surgery waiting times
- Hand hygiene and infection rates
- Length of stay in public hospitals
- Healthcare-associated bloodstream infections.

The screenshot shows a navigation menu with tabs for 'Services and waiting times', 'Cancer', 'Safety and quality', 'Stays in hospital', and 'Profile'. The main content area is titled 'Healthcare-associated *Staphylococcus aureus* bloodstream infections'. It includes a brief description of the bacteria and a table of performance data for the year 2012-13. A peer performance chart shows the hospital's rate of 1.48 compared to a national peer group rate of 1.35.

Year	Cases	Days of patient care under surveillance	Rate	Performance in peer group for rate of infection
2012-13	27	182,681	1.48	Peer performance: 1.35

This website not only enables the public to make informed decisions, it empowers clinicians and service providers to drive improvements in health care services.

Visit MyHospitals for the latest information on your local hospital

Data has been updated for the following measures:

- Time spent in ED for the 112 hospitals covered in this report and an additional 174 public hospitals
- Waiting times in ED (time to treatment) in 286 public hospitals
- Elective surgery waiting times in 245 public hospitals including waiting times for specific procedures such as knee replacement, hip replacement and heart surgery.

What is the National Health Performance Authority?

We are an independent government agency that provides information on health care organisations at a local level across Australia. We produce regular reports and publish data online.

The Performance Authority's activities are guided by a document called the Performance and Accountability Framework agreed by the Council of Australian Governments. The framework contains 48 indicators that form the basis for the Performance Authority's reports.
