Australian Institute of Health and Welfare

Annual Report 1991–92

Institute of Health and Welfare

Annual Report 1991–92
Australian Institute of Health and Welfare
Annual Report 1991–92
Dear Minister

I am pleased to present the Annual Report of the Australian Institute of Health and Welfare for the year to 30 June 1992, as required under Division 3, Part 11, Section 63M of the Audit Act.

The report covers the year immediately preceding the date on which I assumed the office of Chairperson of the Institute, and I have therefore consulted with the former Chairperson, Emeritus Professor Peter Karmel, AC, CBE, who has cleared the report as being an accurate account of the work of the Institute over the year 1991–92.

I wish to draw your attention to the significant achievements of the Australian Institute of Health and Welfare during the reporting period, and to acknowledge the contributions made by my predecessor, Professor Karmel, and the previous Board.

Yours sincerely,

Fiona J Stanley
Chairperson

6 November 1992

Board members

Members of the Board during 1991–92 were as follows. The number of meetings attended during the year is shown in brackets.

**Chairman**
Professor Peter Karmel, AC, CBE (4)
Appointed 1 July 1988, term extended to 30 June 1992

**AIHW Director**
Dr Leonard R Smith (4)
Appointed 1 July 1988

**Three nominees of the Australian Health Ministers' Advisory Council**
Dr Jean P Collie (4)
Appointed 1 July 1988 to 31 December 1991
Dr P Sue Morey (2)
Appointed 1 December 1988 to 30 November 1991
Dr David Filby (4)
Appointed 6 December 1991; term extended to 30 June 1992

**Australian Statistician**
Mr Ian Castles AO, OBE

**Secretary of the Department of Health, Housing and Community Services**
Mr Stuart Hamilton (4)

**Nominees of the Minister for Health, Housing and Community Services**
Professor Bettina Cass (1)
Appointed 27 February 1991
Mrs Gay Davidson (4)
Appointed 1 July 1988; term extended to 30 June 1992
Dr Richard B Scotton (4)
Appointed 1 July 1988 to 31 December 1991

**Nominee of the Public Health Association of Australia**
Dr Ian T Ring (2)
Appointed 1 July 1988; term extended to 4 May 1992

**Nominee of the Consumers' Health Forum**
Ms Rosemary V Calder (4)
Appointed 1 July 1988; term extended to 4 May 1992

Alternate members for 1991–92:

**Nominee of the Secretary of the Department of Health, Housing and Community Services**
Mr Alan J Bansemer

**Nominee of the Australian Statistician**
Mr Timothy J Skinner (2)

A representative from the office of the Minister attended three meetings and a staff representative, Mr Chris Stevenson, attended four meetings. Professor Ken Donald, representing the National Health and Medical Research Council, and Professor Bob Douglas, representing the National Centre for Epidemiology and Population Health, each attended two meetings as observers.
The Australian Institute of Health and Welfare (AIHW) is an independent Commonwealth statutory authority. It undertakes statistical and research work in the health and welfare areas and provides support both to the Commonwealth and to the States and Territories, either direct, or through the Australian Health Ministers' Advisory Council (AHMAC), the Standing Committee of Social Welfare Administrators (SCSWA) and State and Territory housing authorities. The Institute's functions are prescribed in its Act.

The Institute was established as a statutory authority in 1987 by the then Australian Institute of Health Act 1987. There have been two major amendments to the Act, the first in 1989 and the second in 1992. The 1989 amendments strengthened the safeguards of confidentiality in section 29 by imposing more stringent controls on the release of information by the Institute, by prohibiting the disclosure of information contrary to the conditions under which it was supplied to the Institute. The 1992 amendment expanded the Institute's role and functions to include welfare-related information and statistics. The Act is now known as the Australian Institute of Health and Welfare Act 1987.

An unofficial consolidation of the Act incorporating all amendments by legislation to 30 June 1992 is at Appendix 2.

The legislation established 'the Institute' as a body corporate with composition as prescribed in section 8 of the Act. This legally constituted governing body is referred to as 'the Board' of the Institute, to avoid confusion with 'the Institute' as the organisation. The Board had 12 members prior to the 1992 amendments to the Act, when the number was increased to 15. The amendments took effect on 4 May 1992 but the new members' term of office does not begin until 1 July 1992.

Board members, with the exception of ex-officio members, are appointed by the Governor-General on the recommendation of the Minister for periods not exceeding three years. The terms of several members which expired on 31 December were extended to meet the Institute's legal requirements until the new Board took office on 1 July 1992. A list of new members is shown at Appendix 13.

Ministerial powers

The Institute is responsible to the Minister for Health, Housing and Community Services. Section 7(1) of the Act provides that the Minister may, after consultation with the Institute Chairperson and the Ministers for Health, Welfare or Housing as appropriate, in each State, by notice in writing delivered to the Chairperson, give a direction to the Institute with respect to the performance of its functions or the exercise of its powers. No such directions were given during 1991-92.

Committees

The Institute has two committees established under section 16 of the Act: the Ethics Committee and the National Committee on Health and Vital Statistics (NCHVS). The Regulations for the Institute's Ethics Committee are provided at Appendix 2 and a report on the activities of the Committee for the year is provided at Appendix 3.

NCHVS was established in 1976 by the Australian Health Ministers' Conference. On 3 July 1989, after a two-year period of reporting jointly to AHMAC and to the Institute, NCHVS was reconstituted as a committee reporting solely to the Institute.

NCHVS did not meet in 1991-92. In November 1991 the Board decided to defer further meetings of the Committee pending restructuring of AIHW advisory committee arrangements following enactment of the amending legislation.

Organisational structure

The Institute has five major divisions: Health Services, Health Technology, Health Monitoring, Welfare, and Corporate Services. The Welfare Division was established after the May 1992 amendments to the AIHW Act which broadened the scope of the Institute's activities.

The Institute has four external units: the National Perinatal Statistics Unit (NPSU) associated with the University of Sydney; the National Injury Surveillance Unit (NISU) associated with Flinders University in Adelaide; the Dental Statistics and Research Unit (DSRU) associated with the University of Adelaide; and the National Reference Centre for Classification in Health (NRCCH) associated with the Queensland University of Technology, Queensland Health and the Australian Bureau of Statistics, in Brisbane.

The Institute has also established formal collaborating arrangements with the Hunter Health Statistics Unit in Newcastle; designated units within St Vincent's Hospital in Melbourne; the Australian Centre for Medical Laser Technology in Adelaide; and the National Centre for Health Program Evaluation in Melbourne.
The greater part of the Institute's funding is appropriated through the Commonwealth Budget as part of the Health, Housing and Community Services portfolio. The 1991–92 appropriation was $4,950,000 (see Appendix 1 for further details). Additional external funds have been obtained for a number of specific projects. Details of externally funded projects are provided in Appendix 8.

Institute staff are employed under the Public Service Act. As at 30 June 1992 the Institute had 88 staff. This number includes staff of one of the Institute's external units, the National Injury Surveillance Unit. Staff of the other three external units are not employed by the Institute but by the universities to which the Unit grants are made. A staffing profile table and a list of staff, their qualifications and area of employment are at Appendix 4.
ACHIEVEMENTS AND DEVELOPMENTS DURING 1991–92

The year under review was an historic one for the Institute. As well as increasing the scope of its functions following amendments to its Act and establishing the National Reference Centre for Classification in Health, the Institute continued its work in other nationally significant areas including development of a National Health Information Agreement and a National Minimum Data Set for Institutional Health Care.

Major events during the year included:

- production of *Australia's Health 1992*;
- the Commonwealth Government decision to extend the role of the Institute to include welfare service statistics;
- enactment of the *Australian Institute of Health Amendment Act 1992*;
- appointment of a new Board, effective from 1 July 1992;
- establishment of a new Welfare Division;
- initiation of a Welfare Data Agreement with State and Territory welfare and housing authorities;
- establishment of a National Reference Centre for Classification in Health;
- formalisation of the designation of the Institute as a World Health Organization Collaborating Centre;
- progress towards implementation of the recommendations of the Committee that reviewed the Institute in March 1991;
- establishment of an AHMAC Taskforce, with AIHW as convenor, to develop a National Health Information Agreement.

These developments are outlined briefly below. More detailed descriptions are provided on pages 10 to 36.

A major function of the Institute is the preparation of a biennial health report for presentation to the Minister. Work on *Australia's Health 1992*, the third biennial health report, was completed during the year for presentation to the Minister on 30 June 1992. *Australia's Health 1992* represents a major advance on the two previous biennial reports (both valuable documents in their own right) and reflects the growing importance and greater experience of the Institute.

The 440-page *Australia's Health 1992* describes the health of Australians, and aspects of health care funding, resources and utilisation. It directs special attention to differentials in health status and health risk factors between various sub-groups of the Australian population. The book also includes an extensive overview of health statistics sources, developments and deficiencies. *Australia's Health
In late 1991, the Commonwealth Government announced an extension of the role of the Institute to include the collation, analysis and publication of national welfare services data and information.

As reported last year, this extension of the Institute's role was recommended by a Working Group set up to advise the Minister for Health, Housing and Community Services. The Working Group was chaired by Professor Bettina Cass, Professor of Social Work and Social Policy at the University of Sydney. The recommendations were endorsed in July 1991 by a Joint Subcommittee of the Australian Health Ministers' Advisory Council and the Standing Committee of Social Welfare Administrators.

The Joint Subcommittee agreed that the Institute assume responsibility for State-based collections on child protection, adoption and substitute care. State Welfare Departments have agreed to provide financial support to the Institute to upgrade, monitor and develop State-based welfare collections.

The 1992 amending legislation changed the Australian Institute of Health Act 1987 to add new functions encompassing the collection, analysis and publication of information and statistics in the areas of welfare services and housing assistance. The new functions enable the development of a new range of national data collections for use in policy development and research. The Institute's health functions remain unchanged.

The amending legislation also changed the name of the Institute to the Australian Institute of Health and Welfare, and provided for an expanded Board membership representative of the Institute's significantly enhanced role.

The restructuring of the Institute through the amending legislation provides for a range of organisations to recommend for membership of the Board four candidates: three with knowledge of the needs of consumers of health, welfare and housing assistance services, respectively; and one person with expertise in public health research. Other members of the Board include the Chairperson; three people nominated by the Minister; one member nominated by AHMAC; one member nominated by the Standing Committee of Social Welfare Administrators; a representative of the State Housing Departments; the Institute Director; the Australian Statistician; and the Secretary of the Department of Health, Housing and Community Services. The amending legislation also provides for one member of the Board to be an Institute staff member elected by the staff.

As an interim measure, pending passage of the amendments to the Act, the appointments of Emeritus Professor Peter Karmel,
Chairperson, and Ms Rosemary Calder, Dr Jean Collie, Mrs Gay Davidson, Dr Ian Ring, and Dr Richard Scotton were extended from 1 July 1991 to 31 December 1991. Delays in passage of the legislation resulted in a further extension of these appointments except for that of Dr Scotton, who retired on 31 December 1991. The appointments of Professor Karmel, Dr Collie, Mrs Davidson, Ms Calder and Dr Ring were extended to 30 June 1992. As a consequence of the provisions of the Australian Institute of Health Amendment Act 1992 the appointments of Ms Calder, representing the Consumers' Health Forum, and Dr Ring, representing the Public Health Association of Australia, expired when the new Act came into effect.

Following enactment of the amending legislation, which came into effect on 4 May 1992, a Welfare Division was created. The Division Head and several staff were appointed to the Division soon after the enactment date.

The July 1991 report of the Joint Subcommittee of the Australian Health Ministers' Advisory Council and the Standing Committee of Social Welfare Administrators (on the enhancement of the Institute) recommended that a memorandum of understanding be agreed to by the Commonwealth and State and Territory governments. It proposed that the memorandum of understanding set out the rights and responsibilities of all parties regarding the collation, analysis and publication of existing welfare and housing assistance data, including State-based child welfare data.

This recommendation was accepted by the Joint Meeting of Health and Social Welfare Ministers on 6 September 1991.

The memorandum was drafted in the form of an Agreement (because funding is involved) and circulated to all State and Territory welfare and housing departments for consideration in late 1991.

Delay in the passage of the amending legislation interrupted further work on the Agreement until mid-May 1992. The Agreement was then amended to take into account the enactment of the legislation, and was recirculated in mid-June 1992 with every prospect of general acceptance.

On 6 February 1992 the National Reference Centre for Classification in Health was established as an external unit of the Institute in association with the Queensland University of Technology, Queensland Health and the Australian Bureau of Statistics. The Centre will assist the Institute in its role as a WHO Collaborating Centre for the Classification of Diseases.

The AIH Annual Report 1990–91 noted that the World Health Organization had designated the Institute a WHO Collaborating Centre for the Classification of Diseases. On 16 August 1991, the designation was formalised with the presentation to the Institute of a
Implementation of Institute Review recommendations

A major review of the Institute was conducted during March 1991 and reported on in the Institute’s Annual Report for 1990–91. Progress towards implementing the Review recommendations has been achieved in a number of areas.

The most significant recommendation in view of the Institute’s substantially expanded role was that the Institute formalise and strengthen its strategic planning. A planning meeting of senior staff established a framework for this process and a new Head of Corporate Services with extensive experience in this area was appointed.

The Board endorsed a process and timetable which will ensure that the new Board is fully involved in the finalisation of the corporate strategy.

The Review recommended that the Institute produce a newsletter and circulate it widely within the health community. The first newsletter (AIH News no. 1) was published in April 1992 and was very favourably received.

The Review also recommended that the Institute publish the availability of its databases. A list of national databases held by the Institute has been prepared and will form the basis for a forthcoming data catalogue. It is shown at Appendix 9. A list of major AIHW datasets will be included as a supplement to AIHW News no. 2, to be published in August 1992.

Action on recommendations relating to the integration of the welfare and health functions of the Institute was delayed by the passage of the amending legislation. Recommendations in this area will be considered by the new Board.

In March 1992 the Australian Health Ministers’ Advisory Council (AHMAC) requested the Institute to convene a Commonwealth/State Task Force to develop a National Health Information Agreement (NHIA), with a preliminary report in October 1992 and a draft Agreement by March 1993.

The NHIA had been the major recommendation of the Forum on Priorities for National Health Statistics, held by the Institute in February 1991 and was strongly endorsed by the Review Committee. The States and Territories have indicated strong in-principle support for the Agreement.

National Health Information Agreement Task Force

plaque by Dr James Robey, Regional Adviser in Health Information, on behalf of Dr S T Han, WHO Regional Director for the Western Pacific.
Achievements and developments during 1991–92

The objective of the Agreement is to establish a cooperative framework with a national perspective, through which national health information can be developed. The Agreement will provide for structures and processes by which the Commonwealth, State and Territory health and statistical authorities will provide commitment and direction to an agreed program to improve, maintain and share national health information.

Work on the Agreement is progressing well and it is expected that the AHMAC timetable will be met. Two meetings of the NHIA Task Force were held in 1991–92.
RESEARCH DIVISIONS

Director’s Unit

Director: Dr Len Smith

Most of the liaison between the Institute and external bodies is the responsibility of the Director’s Unit. The Director attends, by invitation, meetings of the Australian Health Ministers’ Advisory Council (AHMAC) and the National Health and Medical Research Council (NHMRC); Dr John Donovan, Principal Medical Adviser, is the Institute nominee on the Public Health Research and Development Committee (PHRDC), a principal committee of NHMRC.

The Director is also a member of the Advisory Committee of the National Centre for Epidemiology and Population Health (NCEPH), and the Advisory Committee of the Centre for Clinical Epidemiology and Biostatistics at the University of Newcastle.

The Institute maintains regular contact with the Australian Bureau of Statistics (ABS) in relation to individual projects. Coordination meetings are held approximately every two months, alternately at the Institute and at the ABS.

The major activities in the Director’s Unit in 1991–92 were the preparation of Australia’s Health 1992, the finalisation of a report on the carcinogenity of dapsone among Vietnam veterans, a continuing study of AIDS death statistics, and a review of psychosurgery in New South Wales.

Australia’s Health 1992 is a comprehensive report on Australia’s health and health services, and developments in health statistics. It brings together and reflects the work of the Institute’s health research staff. Based in the Director’s Unit, a Project Group of three Institute staff was responsible for preparation of the report. The Project Director and Editor of Australia’s Health 1992 was Dr Neil Thomson. A Board Steering Group oversaw preparation of the report. Members of the Steering Group were the Institute Director Dr Len Smith, Institute Visiting Fellow Dr Sid Sax, and Board members Ms Rosemary Calder, Mrs Gay Davidson and Dr Richard Scotton.

Many new topics are covered, and many issues, particularly data issues, are explored in greater depth in Australia’s Health 1992 than in previous editions of the report. The report is divided into two parts: Part 1 covers health and health services, while Part 2 deals primarily with health statistics, including an extensive overview of Australian sources, developments and deficiencies.

This study, commissioned by the Department of Veterans’ Affairs, was conducted by AIHW under the guidance of a Scientific Advisory...
Committee (SAC) chaired by Professor Geoffrey Berry, Professor of Public Health at the University of Sydney. The investigation was completed during the year, and the report is being finalised in consultation with the SAC, which plans to consult with the Department and veterans' organisations before presenting the final report to the Minister for Veterans' Affairs.

A paper by Dr John Donovan published in early 1990 showed that ABS death statistics to 1988 included more deaths from AIDS than were known to the National Centre for HIV Epidemiology and Clinical Research.

Subsequently, the Institute and the Centre have tried to identify the causes of this difference by reconciling records relating to individuals who were included in only one of the two statistical collections. The study has also been extended to cover deaths up to 1990, and approval to obtain the relevant records from the NSW Registry of Births, Deaths and Marriages has been obtained from the NSW Privacy Committee. Work is continuing.

In 1990–91 the Institute, together with the Social Psychiatry Research Unit at the Australian National University, was awarded a contract to review the outcome of all psychosurgical procedures in NSW since 1977.

During 1991–92 the study protocol was finalised, and questionnaires were developed and tested. The project has been divided into two stages, at the request of the NSW Department of Health. The first stage will trace a cohort of patients, determine cause of death for those who have died and current address for those who are living, and report on the findings. After this stage the NSW Department's Steering Committee for the project will decide how many patients should be examined in the second stage.

The tracing process was nearing completion at the end of 1991–92.
Welfare Division

Head: Dr Ching Choi

The Welfare Division's areas of work are defined in the *Australian Institute of Health and Welfare Act 1987*. They include aged care services, childcare services, services for people with disabilities, housing assistance and child welfare services.

The main activities of the Division since May 1992 concentrated on establishing the Division and developing a work program. Contacts were established with a number of priority areas in the Department of Health, Housing and Community Services.

In accordance with the Division's objective of developing national data on welfare services, consultation was initiated with State and Territory welfare and housing departments towards an agreement which will set out the roles and responsibilities of the Institute, the Commonwealth and the States and Territories in relation to the provision of data to the Institute.

Work commenced on compiling an inventory of welfare programs provided by Commonwealth and State government agencies and on identifying the availability of the existing data from these programs. This inventory will help in any future collation of national data and in the assessment of the quality of the existing data.

The Division also made an early start on the collation and publication of data from State-based collections on child welfare including adoption, child protection and substitute care. With agreement and support from State Government agencies, data are being compiled and analysed for publication in 1993.
Health Services Division

Head: Mr Roy Harvey

The Health Services Division is responsible for producing and analysing national data and information on the provision and use of health services in Australia, and the resources needed to support them.

This year the Division's major activities were in three areas:

- development of national health labourforce collections;
- continued development of the National Minimum Data Set for Institutional Health Care; and
- production and analysis of health expenditure information.

During the year the Division broadened the scope of its institutional data collection, and took steps to improve the timeliness and availability of information from that collection. This was achieved by reducing the resources allocated to analysing medical services statistics and responding to requests for information. As medical services statistics are available from the Department of Health, Housing and Community Services and the Health Insurance Commission, users still have reasonable access to this information.

Collections for registerable health professions are being developed and target dates for the project are in accord with the June 1990 AHMAC request to establish a comprehensive labourforce database by the end of 1993. Work on these national health labourforce collections continued to be a major component of the Division's work.

During 1991–92 consultations continued with State and Territory registration boards and health authorities on details of data to be collected for nurses, medical practitioners, pharmacists and podiatrists.

Negotiations commenced with various organisations on establishing the physiotherapy labourforce collection, and with the Dietitians' Association of Australia and the Australian Association of Occupational Therapists about collections for those professions.

The dental labourforce collection is being developed by the AIHW Dental Statistics and Research Unit in cooperation with the Division's Health Labourforce Unit.

The Health Labourforce Unit also assisted State health authorities in developing a medical radiation technology labourforce survey in New South Wales and a radiography labourforce survey in Tasmania.

Other work relating to labourforce collections included:

- providing support to AHMAC's Medical Workforce Data Review Committee. The Resident Medical Officer situation continued to be
monitored and update information presented. Projections of the medical workforce were prepared for the Committee's consideration;

- overseeing a consultancy to complete a medical forecasting model developed by the Victorian Medical Postgraduate Foundation, and convening a demonstration seminar. An evaluation of the model was commenced as a joint project with the NSW Health Department;

- undertaking a consultancy, still in progress, commissioned by the Australian Nursing Council Steering Committee on the development and implementation of a national nurses' administrative database as a step towards effecting mutual recognition of nursing qualifications (mutual recognition is the acceptance by States and Territories of trade or professional qualifications and registration granted in another State or Territory);

- conducting consultations to ensure that progress to mutual recognition, and the associated establishment of national registers, is compatible with the national data collection process; and

- providing advice on labourforce issues, and responding to requests for information on an extensive range of labourforce matters.

A high priority for the Division continued to be the development and collection of consistent national data on health services, including hospitals and nursing homes. Much of this work was done at the request of AHMAC and built on work begun in 1986. The result has been the National Minimum Data Set (NMDS) Program. The Institute's Health Services Unit chairs and provides secretariat services to the NMDS Review Committee, which is responsible for the Program.

The major components of work in this area during the year were:

- development and review of the NMDS, undertaken in conjunction with the ABS and in consultation with Commonwealth, State and Territory health authorities, and the Australian Private Hospitals Association. A consensus on the scope and direction of the NMDS was achieved through this consultative process. AHMAC funded a position for the survey program, which progressed well in 1991–92.

- continuing work on the production of the National Health Data Dictionary (NHDD) for Institutional Services. The NHDD will be the culmination of the NMDS consultative process.

The NMDS survey builds on and replaces the earlier Hospital Utilisation and Costs Studies (HUCS).
This year the report of the second HUCS (1987–88) was published and
the third (1989–90) was nearly completed. The next study, planned for
text here
early 1992–93, will be the first of the annual NMDS-based surveys.

Health Services Bulletin No. 2 was published in May 1992. It provided a
preliminary brief statistical overview of the major components of
Australian health care service use. More detailed descriptions are
contained in the forthcoming Hospital Utilisation and Costs Study

The Health Services Unit and the National Casemix Advisory Unit
(NCAU) in the Department of Health, Housing and Community
Services collaborated closely this year on defining standards for
gathering patient information for the Casemix program.

Work continued on the development of a national hospital morbidity
database. A major publication this year, Variations in Surgery Rates,
utilised these data to report on the remarkable variability found in
surgery rates across Australia.

The Division has further developed its collection of health
expenditure data, which includes information about the amounts
spent on health services by governments, private organisations and
individuals. This information allows limited comparisons with other
countries and is a major component of the Australian health and health
expenditure statistics provided to the Organization for Economic
Co-operation and Development.

The collection also provides data for more detailed analyses of
expenditure, to allow reporting of items such as longer term trends
and expenditure patterns. Health Expenditure Bulletin No. 6, published
in May 1991 contained data on health expenditure in the public and
private sectors in 1988–89. During the year, work was completed for
Health Expenditure Bulletin No. 7 which covers the 1990–91 period. It
will be published in July 1992.

During the year substantial resources were devoted to responding to
requests for information on health economics and health expenditure
matters. Requests are received from government health authorities,
private sector health organisations, academics and the general public.

OthersignificantactvitiesundertakenbytheHealthServicesDivision
during 1991–92 included:

- a feasibility study of measuring the incidence of adverse events
affecting hospitalised patients. The study was commissioned by
the Professional Indemnity Review of the Department of Health,
Housing and Community Services;
• managing a project to examine the effects of socio-demographic and ethnic factors on the demand for acute hospital services. The study was commissioned by the Department of the Prime Minister and Cabinet;

• providing advice to the Department of Veterans' Affairs on the development of surveys and methodologies to measure service use and health outcomes of its clients;

• collaborating with a group being established at the Queen Elizabeth Hospital in Adelaide to undertake research into the clinical effectiveness of health services relating to asthma and cardiovascular disease;

• analysing trends in the use and costs of hospital services, in collaboration with the Hunter Health Statistics Unit, the AIHW Collaborating Centre at the University of Newcastle;

• medical workforce modelling work, funded by AHMAC;

• an evaluation, funded by AHMAC, of Department of Health, Housing and Community Services programs involved with the health of women and delivery of health services to women;

• a project on the health impact and financial aspects of the ageing of the Australian population in the 21st century, funded by the Economic Planning Advisory Council; and

• economic analysis work including disease impact costings (a joint project with the AIHW Health Technology Division).

Evaluation

The Division has made significant progress in developing definitions and standards, and in obtaining agreement to, and collecting and publishing, national data collections. Its success in developing the NMDS for Institutional Health Care, and in obtaining agreement from AHMAC to the national survey program, was achieved only by reducing the resources devoted to medical service analysis.

The Division contributed to the understanding of specific health services issues by undertaking its own research and by assisting other organisations' research projects. An indication of the Division's success is shown by the extent to which its services have been sought as consultant to external groups.
Health Technology Division

Head: Dr David Hailey

Health Technology Division undertakes studies on the role, distribution, costs and effectiveness of health care technologies. It collects and analyses data on health technologies, and undertakes assessments of the economic impact of disease and disease prevention programs. Advice on these areas is provided to other health agencies and the community.

Two new reports in the Health Care Technology series were published. One dealt with cochlear implants, devices which permit profoundly deaf people to sense sounds and enable them to be taught to recognise speech. The other was on angioplasty in peripheral artery disease. Angioplasty is a catheter-based technique for the treatment of arterial obstructions.

Discussion papers produced during the year covered:

- lasers in angioplasty;
- boron neutron capture therapy (an experimental form of radiotherapy for certain types of cancer);
- laser corneal sculpting (a technique for the correction of myopia);
- assessment of the place of magnetic resonance imaging in Australia; and
- minimal access surgery (various forms of less-invasive or 'keyhole' surgery).

Two issues of the newsletter Health Tech News were published during the year. In response to expressions of interest after wide circulation of sample copies, its mailing list was substantially expanded.

During 1991-92 the Division continued to support the Australian Health Technology Advisory Committee, a standing committee of the National Health and Medical Research Council (NHMRC) Health Care Committee. As in 1990-91, the work of AHTAC was largely concerned with the Nationally Funded Centres Program.

A major AHTAC review of the Australian liver transplantation program in relation to national funding was published. Assessments were completed of the suitability for Nationally Funded Centre status of:

- pancreas transplantation;
- stereotactic radiosurgery;
- certain types of bone marrow transplantation; and
- craniofacial surgery.
A cost protocol was produced as a framework for proposals for Nationally Funded Centre status and for reviews of Nationally Funded Centres.

AHTAC also finalised service delivery guidelines on renal dialysis and renal transplantation, a project which had been begun by one of its predecessors, the Superspecialty Services Subcommittee (SSS) of AHMAC.

During the year, a questionnaire was sent to all recipients of AHTAC reports and those of its predecessors, the National Health Technology Advisory Panel and the SSS, with the aim of assessing the usefulness of their publications. There was a high response rate to the questionnaire, with the great majority of respondents finding the reports useful or very useful.

**New initiatives**

The Division prepared a report for the Department of Health, Housing and Community Services on methodology for providing early warning of important new health technologies. Following this work, the Division developed a series of briefs on emerging health technologies, aimed at providing health care policy-makers, planners and administrators with early, concise and relevant information on significant new developments.

At June 1992, 10 briefs had been distributed. Topics covered were laser corneal sculpting, radio frequency catheter ablation, cervical loop diathermy, laparoscopic surgical techniques, endovascular stents, holmium lasers in corneal sculpting, cardiomyoplasty, collagen implant therapy for incontinence, excimer lasers in coronary angioplasty and new technologies for the treatment of an enlarged prostate gland. Two of the briefs (on stents and collagen implants) resulted from exchange of information with Canadian assessment agencies.

The Division published the first issue of *Health Tech Stats*, a bulletin providing information on the distribution, level and trends of use of health technologies in Australia. The first issue summarised Medicare data on the usage of health technology services over the period 1984–85 to 1990–91.

The Division is undertaking a major project for NHMRC and the National Better Health Program to provide an economic overview of the potential impact and worth of a range of possible health promotion and illness prevention programs.

The project includes the development of an approach to link changes in risk factors and disease incidence to changes in health status and to the cost of providing health care. It has drawn on a number of datasets held by the Institute and involved input from the AIHW Health Monitoring and Health Services Divisions.
During the year, the project staff, in collaboration with the National Centre for Health Program Evaluation, undertook a study of the economic impact of diet-related disease, and presented a paper at the National Forum on Food and Nutrition Policy. This work included cost-of-illness and life expectancy estimates for 17 diet-related diseases, and another 41 diseases for the alcohol-related disease group.

A paper was also prepared on the economic impact of smoking-related disease. Macro-economic indices have been estimated for the cost-effectiveness of various initiatives aimed at discouraging smoking and poor diet. Current work is focusing on the economic impact of exercise, obesity, traffic injuries, colorectal cancer, various infectious diseases, osteoporosis, high blood cholesterol and hypertension.

The Division continued to contribute to the evaluation of biliary lithotripsy at St Vincent’s Hospital, Melbourne. The second interim report on this assessment was issued as a joint publication with the hospital, and included data on both lithotripsy and the more recent alternative technique of laparoscopic cholecystectomy.

The Division assisted in coordinating a comparative evaluation of copper bromide and pulsed dye lasers in dermatology, in association with the Australian Centre for Medical Laser Technology and Royal Prince Alfred Hospital, Sydney. A commissioned project on digital radiography systems was completed, and support continued for commissioned projects on the methodology of cost utility analysis of treatments for biliary disease, osteoporosis and efficacy of MRI examinations.

A major paper on maximising the impact of health technology assessment was developed in collaboration with the National Centre for Health Program Evaluation.

The Division responded to a range of requests for advice on evaluation and on health technologies. Agencies advised included the Commonwealth units responsible for implementing the national breast and cervical cancer screening programs, and the Commonwealth Rehabilitation Service.

The Division again had a successful year. Obligations to AHTAC were met and an effective contribution was made to the assessment of health technologies in Australia. The new directions taken are likely to contribute usefully to health care policies and planning. Evidence that the work of the Division is valued by the community has been provided by responses to the AHTAC questionnaire, favourable comments on the emerging health technology briefs and the Divisions' reports, interest generated by Health Tech Stats, and requests for publications and presentations.
However, there were problems, the net effect of which was to limit output. Examples included delays by other bodies in responding to reports from the Division, and limitations on resources which tended to restrict the coverage the Division was able to provide on health technology matters and restricted the depth of analysis that was possible.
Health Monitoring Division

Head: Dr Colin Mathers

The Health Monitoring Division focuses on monitoring and evaluating the health of Australians and of population subgroups. It also seeks to improve the range of collections and quality of statistical information available, and provides the contact point for contributions to international health status data.

The Division’s most significant progress towards meeting its goals during 1991–92 was achieved through:

- the completion of a major project to document health differentials among Australians and to identify links between socioeconomic status and health, for the National Health Strategy review;
- the publication of a comprehensive report on health expectancies in Australia. Collaboration with international experts in this field has led to considerable progress in understanding the relationship between the various methods of calculating health expectancies and their relationship to disease modelling;
- the completion of a review of the health status and needs of immigrant Australians;
- the establishment of complete national data for the years 1983–85 by the National Cancer Statistics Clearing House (a publication is pending); and
- the agreement with Registrars of Births, Deaths and Marriages on a protocol for the operation of a National Death Index.

A major study of trends in Australian mortality from 1921 to 1988 was published in 1991 and received a favourable response from both health-related and academic institutions. A follow-up project on trends in mortality for major disease groups has been initiated.

The final version of this inventory was published in November 1991 as a guide to major Australian health data collections.

This project, a review of the health status and needs of migrant Australians, was commissioned as part of the National Agenda for a Multicultural Australia. It was finalised in April 1992 and two publications are in press:

- *Immigrants in Australia: a health profile*; and
- *Inventory of Australian health data collections which contain information on ethnicity*.

Dr Christabel Young, Department of Demography, Research School of Social Sciences, Australian National University, wrote several
National Death Index

Following a recommendation of NHMRC the Institute is establishing a National Death Index to facilitate the conduct of epidemiological studies. As a single computerised index of all Australian deaths, it will obviate the need to seek the assistance of eight State and Territory Registries of Births, Deaths and Marriages to determine whether study subjects have died.

All States and Territories except Queensland have now formally agreed to participate in the NDI. Negotiations are taking place for temporary approval to be given for Queensland to participate, pending the enactment of privacy legislation in that State. The NDI protocol was finalised and a steering committee set up.

Data were received from three States and a prototype database established. Delays were experienced in obtaining further data but these are expected to be resolved shortly.

National mortality database

The Australian mortality data held by AIHW were extended to cover the period from 1964 to 1990. A relational database was created covering the years 1980 to 1990 based on the Australian Bureau of Statistics death unit record format extended to include registration number.

Mortality statistics for the years 1987 to 1989 have been prepared by four-digit ICD code, age and sex, and supplied to the World Health Organization for inclusion in the World Health Statistics Annual.

National Cancer Statistics Clearing House (NCSCH)

Complete national data for 1982-1985 have been established and Cancer in Australia 1983, 1984 and 1985 will soon be published in conjunction with the Australasian Association of Cancer Registries.

The NCSCH provided input to a handbook for general practitioners written by Dr Alison Free of the Cervical Cancer Screening Task Force.

A paper, The incidence of cutaneous malignant melanoma in Australia in 1989, was submitted to the Medical Journal of Australia.

Data requests from individuals, private organisations and State and Territory governments are becoming very frequent as the NCSCH becomes better known. Advice on the availability and timeliness of cervical cancer data and other forms of cancer data was provided to the Senate Estimates Committee.

Health expectancies

ABS survey data on the prevalence of disability and handicap among Australians in 1981 and 1988 has been used to calculate life expectancy free of disability, free of handicap, and free of severe handicap. These 'health expectancies' provide measures of population health which combine mortality and morbidity experience in a conceptually simple way, and are expressed in meaningful units (years of life).

Data from the 1980, 1983 and 1989 National Heart Foundation Risk Factor Prevalence Surveys were analysed for trends in risk factor levels. This analysis, conducted in conjunction with the Foundation, is being prepared for publication as a journal article.

An analysis of iron status of Australian adults was carried out for the Department of Health, Housing and Community Services using data from the 1983 Nutrition Survey conducted in conjunction with that year’s Risk Factor Prevalence Survey.

To assist in examining equity issues in relation to health status and use of health services, analyses of health status differentials were undertaken for the National Health Strategy. To identify links between socioeconomic status and health, analyses were undertaken of the following datasets:

- national mortality data;
- 1989–90 National Health Survey;
- 1988 Survey of Disabled and Aged Persons; and

The completed analyses included estimates of differentials in mortality, disability, handicap, chronic illness, recent illness, reduced activity, self-reported health status, health service use, selected health risk factors, childhood immunisation, rubella immunisation, Pap smear screening rates, mammogram screening rates and prevalence of breast-feeding. Multivariate analyses of differentials included serious chronic illness rates, self-reported health status and service utilisation rates. These analyses were published in *Australia’s Health 1992*.

Australia is one of 24 member countries of the Organization for Economic Co-operation and Development (OECD). The Institute is responsible for providing OECD with Australian health statistics covering a wide range of subjects, including births, life expectancy, morbidity, mortality, nutritional intake, consumption of cigarettes and tobacco, utilisation of health services and facilities, providers of health services, and expenditure.

The Division assisted OECD in preparing its publication *Health OECD: Facts and Trends* in which the health statistics of member countries are tabulated and discussed. OECD is in the process of obtaining uniformity of health definitions for member countries so that statistics reflect true inter-country differences, and the Institute is contributing to this effort.

The core work of the Aboriginal and Torres Strait Islander Health Unit continued to be the collation and analysis of statistics on the health of
Aboriginal and Torres Strait Islander people. In this work, undertaken with the active cooperation of State and Territory authorities, most attention has been directed to the areas identified as priorities by the 1984 Task Force on Aboriginal Health Statistics: births, deaths, hospitalisation and maternal/perinatal outcome.

As part of the Commonwealth Government's implementation of the National Aboriginal Health Strategy, the Institute's role in the development and provision of Aboriginal health statistics has been strengthened.

During the year, the Institute's Aboriginal health databases were developed further, and an overview of mortality and hospitalisation was compiled for *Australia's Health 1992*. The Unit also published a detailed review of Aboriginal health status in Queensland, and completed an analysis of the fertility and mortality of Aborigines living in the Queensland Aboriginal communities between 1972 and 1990.

Completion of a consultancy for the National Drug Abuse Information Centre (part of the National Campaign Against Drug Abuse) resulted in the publication of a report on data sources on drug use and related problems among Aborigines, and a companion bibliography.

Further analysis of the survey of long-term health problems of Aborigines living in the Taree region of New South Wales was undertaken, and a revised report provided to the Biripi Aboriginal Corporation Medical Service. A full report is in the final stages of preparation.

The Unit Head contributed to the planning for, and participated in, an Australian Institute of Aboriginal and Torres Strait Islander Studies workshop entitled 'Confronting the barriers to improvements in Aboriginal health: the role of research', which was held in Canberra on 28–30 April 1992.

Dissemination of information on Aboriginal and Torres Strait Islander health continues through the twice-yearly *Aboriginal Health Information Bulletin*, and the Unit assisted the National Library of Australia in its compilation of material for the computerised Aboriginal health bibliography.

The Division has both service and research functions. The major targets for the year for the service functions were bringing the National Cancer Statistics Clearing House into operation and obtaining agreement to establish the National Death Index. With the provision of cancer registration data to the Institute and the development of software for identifying duplicate registrations, the former target was achieved. Regrettably, one State (Queensland) has not yet agreed to participate in the National Death Index, so that target has not been achieved. Together with devising a basis for funding for the Index, and

The research projects of the Division generally progressed on schedule, although some were affected by delays in publication of reports, a matter which will receive attention in 1992–93. A major research achievement of the division, defining the relationship between social factors, particularly unemployment, and health, could potentially have a significant influence on government policy. Pursuing these findings, and their further development, will be a major challenge for 1992–93.
EXTERNAL UNITS AND COLLABORATING CENTRES

National Perinatal Statistics Unit

Head: Dr Paul Lancaster

The National Perinatal Statistics Unit (NPSU) is based at the University of Sydney. The core functions of the Unit include the collection and analysis of mortality and morbidity data (including congenital malformations) relating to the perinatal period, the provision of data on birth defects and congenital malformations to international data collections, and the dissemination of information through a consultation service and provision of routine reports.

During the year the Unit maintained national data systems on congenital malformations, assisted conceptions and home births, and analysed data from these and other sources for reports and other studies, in collaboration with State and Territory health departments and other professional groups. The minimum data set for perinatal collections was reviewed and will be discussed at a forthcoming meeting of the National Perinatal Data Advisory Committee.

The national monitoring system on congenital malformations includes data on more than 38,000 malformed fetuses and infants from more than 2.5 million births in the years 1981 to 1991. Quarterly and annual data were published by the Unit on specific and total malformations.

The Unit provided national data to the International Clearinghouse for Birth Defects Monitoring Systems and participated in international studies of selected malformations. The epidemiology of small intestinal atresia in singleton and multiple births, its association with prenatal diagnostic procedures, and the outcome of twin pregnancies after amniocentesis, were studied with the assistance of a grant from the NSW Department of Health.

All pregnancies after assisted conception in Australia and New Zealand are included in the NPSU's register, which is partly funded by the Fertility Society of Australia, and Organon. The Unit published a report based on treatment cycles in 1989 and pregnancies resulting from conceptions in that year.

The policy of IVF centres to reduce the number of embryos or oocytes transferred to treated women was evaluated by analysing the occurrence of multiple births. Data in the register were analysed to study the association between the drugs used to stimulate ovulation and early pregnancy losses. They were also used to study the factors associated with preterm birth. These studies, and comparisons of birth defects after assisted conception with population data, were
published or presented at several international and Australian conferences.

Considerable progress towards publication of international data on assisted conception was made through further meetings of the International Working Group for Registers on Assisted Reproduction. Funding for this project was obtained from an Italian organisation and the NPSU Director convened and chaired the meetings.

**Home births**

In collaboration with Homebirth Australia, NPSU collected data for a report on home births occurring in the years 1988 to 1990. This study is being funded by a grant from NHMRC.

**Other activities**

Other work undertaken by NPSU during the year included:

- publishing the quarterly *Perinatal Newsletter*, with the assistance of a grant from the Australian Perinatal Society. The newsletter provides information on perinatal data and research studies to public health professionals, scientists, nurses, and clinicians;
- hosting the annual meeting of the International Clearinghouse for Birth Defects Monitoring Systems in September 1991;
- organising a successful Birth Defects Conference in conjunction with the Australian Teratology Society;
- organising a workshop on methodology for birth defects monitoring, in conjunction with the World Health Organization; and
- participating in national meetings of the Australian Perinatal Society, Australian Teratology Society and the Fertility Society of Australia.

Sir Norman McAlister Gregg was the Sydney ophthalmologist who first showed that maternal rubella in early pregnancy caused congenital cataracts and other birth defects. Two significant anniversaries, 50 years since the publication of his seminal paper in October 1941, and the centenary of his birth on 7 March 1892, occurred during the past year.

NPSU honoured Gregg’s work at an International Birth Defects Conference it hosted in Sydney in September 1991 and in an essay in a booklet published by the Royal Australasian College of Physicians. Wider recognition of his work was promoted through the *University of Sydney News* and media interviews.

**Evaluation**

During the past decade, the National Perinatal Statistics Unit has developed two national data systems based on unit record data, one on congenital malformations and the other on assisted conception. As well as providing data for regular reports, these data systems are increasingly being used for research studies and evaluation of clinical practice.
In the next few years, the NPSU proposes to publish regular perinatal bulletins based on material collected by State and Territory perinatal data systems. Topics will include cesarean births, low birthweight, multiple births, and maternal risk factors. NPSU also plans to begin publishing an annual summary of results from neonatal intensive care units in Australia.

NPSU will continue its active international collaboration in monitoring birth defects and in providing a worldwide summary of results of treatment of infertile couples by assisted conception.
Dental Statistics and Research Unit

Head: Professor John Spencer

The role of the Dental Statistics and Research Unit (DSRU) is to improve the range and quality of statistics on the dental labourforce, dental practices, dental health status and use of dental services. It has been funded by the Institute since 1988 and is located at the University of Adelaide’s Department of Dentistry.

The two major areas of DSRU’s work program are the National Dental Labourforce Data Collections, and the Child Dental Health Survey.

The National Dental Labourforce Data Collections were initiated in 1988. Dental labourforce data are collected at annual registration with State and Territory Dental Boards and are being substantially revised to bring the dental labourforce data into line with the National Health Labourforce Data Collections more recently introduced by AIHW.

DSRU collaborated with the Institute’s Health Labourforce Unit in negotiations with States and Territories over agreements for National Health Labourforce Data Collections and the specific details for implementing the revised collections.

Over the last year six States and Territories participated in the dental labourforce collections. In a number of these States and Territories the revised collections were implemented, or will be implemented in the next round of collections. Agreement was reached on participation by Western Australia and Queensland in the National Dental Labourforce Data Collection. This will create the full participation necessary for complete national reports.

Two other activities are related to DSRU’s dental labourforce work program. The Longitudinal Study of the Labourforce Participation and Productivity of Dentistry in Australia is providing detailed information on the activity of a sample of Australian dentists. This is enabling various trends in practice to be discerned and allowing conversion of dentist numbers to age- and sex-adjusted full-time equivalents. Such adjustments can then be incorporated in projections of dentist labourforce supply.

Recruitment and wastage rates among dentists were studied and a computer model to project dentist labourforce supply is being applied. The projected rate of growth of dentist supply is lower than that of the Australian population. Adjustment to full-time equivalents shows even more rapid reduction in dentist numbers per 100,000 population.

A report to the Australian and New Zealand Association of Oral and Maxillofacial Surgeons on surgeon labourforce and training requirements to take the dental speciality into the 21st century was completed in May 1992.
In 1989 the DSRU redesigned the Child Dental Health Survey and it was successfully implemented in all States and Territories. DSRU prepared regional, State and Territory reports for dental health authorities. National reports on child dental health were drafted for 1989 and 1990 using new weighting procedures. The national data show the continued improvement in child dental health. However, more than two-thirds of the dental caries in children is experienced by around 20 percent of the child population.

The actual information available on child dental health is being considerably enhanced by the participation of three States and Territories in supplementary research on fluorides and dental health. In Queensland, South Australia and the Australian Capital Territory two supplementary research projects have been implemented that supersede the Child Dental Health Survey.

The projects change the nature of the research from cross-sectional to longitudinal and the unit of collection from the tooth to tooth surface. They also link dental health information to a range of social and behavioural factors. Baseline data collection was completed on over 21,000 children in Queensland and South Australia and data collection was commenced in the Australian Capital Territory.

Other DSRU activities during the year related to its clearing-house role or its support of associated research. This routinely involves the production and distribution of a newsletter and interaction with a range of dental and other health bodies.

A major activity this year was undertaken for the National Health Strategy Unit, Department of Health, Housing and Community Services. This involved preparing and presenting information on trends in dental health, on social inequalities in dental health and on access to dental services. Much of the information has been incorporated into the National Health Strategy paper *Improving Dental Health in Australia* (May 1992). The key findings of DSRU's work were a shift in the burden of dental disease from children to adults, and a pattern of less frequent use of dental services and less restoration of diseased teeth among disadvantaged groups of adults.

DSRU staff also contributed to the preparation of a contracted report, *Contemporary Dentistry—1991*, for Queensland Health. The report profiles the epidemiology and demography of dental diseases, together with interventions within dentistry to address identified problems.

Support was also provided to the South Australian Dental Longitudinal Study, and the Longitudinal Follow-up of the National Oral Health Survey 1987–88, South Australian Component. Both activities were supported by NHMRC.
DSRU proposed new initiatives in dental surveys as a result of interest from the Australian Dental Association, the NHMRC Dental Health Committee and the National Health Strategy. The initiatives are directed toward improving data available on dental health and use of services. They were motivated by an assessment of current trends and future problems in dental health, particularly among adults.

Over the year DSRU was successful in improving its core activities and planning for an expanded role in dental statistics. The successful negotiation for all States and Territories to participate in the collection of dental labourforce data will enhance the Unit's contribution to labourforce issues. The conduct of supplementary projects linked to children's dental health monitoring will also act as a model for more generalised higher quality dental health status data.

DSRU's work program includes a range of externally funded activities. Its collective workload stretched available resources and there were some delays in publishing routine output. This was accentuated by the trend to regionalise many health authorities and requests for regional as well as State- and Territory-level reporting. DSRU contributed to the examination of Australia's dental health and reacted quickly with proposed new data collections for obvious shortcomings in existing data on adults.
National Injury Surveillance Unit

Head: Dr James Harrison

The National Injury Surveillance Unit (NISU) has responsibility for public health surveillance of injury at the national level. The Unit is active in all aspects of injury surveillance, placing special emphasis on analysis and dissemination of information, and the development of injury surveillance methods.

In addition to injury surveillance, NISU assists public health injury prevention by providing a national focus for liaison and sharing of information, producing information resources and encouraging training and research.

This was NISU's first complete financial year of operation. It was a year of rapid change and development. NISU moved towards full functional incorporation as part of AIHW at the end of the year, in preparation for the change from external project funding (under the National Better Health Program, NBHP) up to the end of 1991-2, to funding within the AIHW appropriation thereafter.

Two major programs, Support and Development of Public Health Injury Surveillance, and the Injury Information Service, had commenced at the beginning of the year. Two new programs, the Road Injury Information Program, and the Injury Prevention Services Program, were established during the year. These four programs are outlined below.

Links with Flinders University were greatly strengthened by the Unit's move to new premises at Science Park adjacent to the University. NISU participated in the formation of a Centre for Health Advancement at the University and staff undertook some teaching and student supervision.

NISU work involves liaison with a number of Commonwealth agencies (including the ABS, Federal Bureau of Consumer Affairs, Federal Office of Road Safety and Worksafe Australia), State and Territory agencies and the injury control community.

Support for users of the Injury Surveillance Information System (ISIS) continued. This included:

- providing and upgrading software;
- providing technical advice and assistance; and
- producing information bulletins.

ISIS data on over 91,000 injury cases, collected from 59 hospitals, were provided to NISU during the year.
NISU involvement in the development of injury surveillance methods included:

- specification of a revised dataset for basic, routine injury surveillance;
- funding of development projects for a revised hospital-based injury surveillance system; and
- preparatory steps for systems development aspects of a new method.

Other work undertaken by NISU included:

- participating in a project aimed at developing a national coroner information system;
- providing support for spinal injury surveillance;
- participating in a review of information systems concerning poisoning; and
- funding (for WA and Queensland) and participating in (for Tasmania) reviews of injury surveillance systems, and their use.

NISU's Injury Information Service published the first three editions of a quarterly journal, the *Australian Injury Prevention Bulletin*, and distributed it widely within the Australian injury control community.

Compilation of information on injury occurrence and prevention continued. Information compiled included published reports, published data, and data in electronic form. Using these sources, 180 reports were prepared in response to inquiries.

A sentinel information system was developed to serve consumer affairs agencies (principally the Federal Bureau of Consumer Affairs). A monograph on injury deaths in Australia was commenced.

Sample injury data (anonymous and modified to prevent identification of individuals) were prepared for use in primary and secondary school curricula. The data will be made available nationally, through the 'NEXUS' electronic information service, operated by the South Australian Education Department.

An Australian *Handbook on Injury Prevention* was prepared. A draft, nearing completion, was circulated for comment at the end of the year.

Funds were provided to NISU during the year from an allocation under the Federal Government's road safety initiative, announced in December 1989, to improve the information available for the purpose of preventing road injury.

The researcher responsible for this program commenced work in January 1992. The Minister for Health, Housing and Community Services has approved funding of the program until December 1994.
The program includes projects to improve information on alcohol involvement in crashes, to make better use of health sector data for road safety, and to improve the indicators used to monitor road safety performance.

**Injury Prevention Services Program**

In response to a need for better liaison and coordination of injury prevention activities nationally, NISU received a National Better Health Program grant during the year to:

- support a program to develop a National Injury Prevention Strategy;
- develop information resources for injury prevention; and
- support organisation and planning for the 3rd World Conference on Injury Control (to be held in Australia in 1996).

These projects, collectively titled the Injury Prevention Services Program, will be based on extensive consultation. The Program developed rapidly late in the financial year, when staff were appointed.

**Evaluation**

Much progress was made in NISU’s major program areas, as outlined above. However there was slippage in several projects compared with the 1991–92 work plan. The Injury Prevention Services Program was expected to commence about the middle of the financial year, but due to the timing of the grant and unexpected delays in recruitment the projects were not staffed until June 1992. Because of these delays, the development of an injury surveillance plan, which should proceed in conjunction with the development of a national injury control strategy, was deferred.

Production of the *Handbook on Injury Prevention* proved to take longer than anticipated and the planned publication date has been deferred by about six months. Some aspects of the Support and Development of Public Health Injury Surveillance program are proceeding more slowly than had been anticipated, largely due to pressure of other work.

Reorganisation of staffing, accommodation and computing resources to better match the work program consumed considerable time and effort. The ‘start-up’ phase for the Unit is concluding and these organisational tasks are expected to reduce in the coming year.
National Reference Centre for Classification in Health

Head: Ms Jennifer Mitchell

The AIHW National Reference Centre for Classification in Health (NRCCH) is located in the Queensland University of Technology’s (QUT) School of Public Health in Brisbane. It was established in February 1992 following the World Health Organization designation of AIHW as a WHO Collaborating Centre for Classification of Diseases.

The Centre is a joint undertaking of AIHW, the School of Public Health at QUT, the Australian Bureau of Statistics and Queensland Health. It is staffed by a half-time director and a full-time medical record administrator. Initially, administrative and technical support has been provided by QUT. It is anticipated that the Centre will generate income from consultancies, research projects and training courses to provide for additional administrative and professional staff.

The Centre liaises with WHO and other international and national bodies in relation to classification in health. It collects and disseminates information about health classification nationally and internationally and provides an environment for individuals who wish to undertake research into aspects of classification in health. It also has expertise to assist AIHW, ABS, State and Commonwealth Departments of Health and other health care organisations in areas related to health classification.

The initial focus of the Centre has been planning for the introduction of the tenth revision of the International Classification of Diseases (ICD-10) into Australia and the Western Pacific Region.

The Centre Director, together with the Institute Director, attended a meeting of Heads of WHO Collaborating Centres for Classification of Disease, in Beijing, where international progress towards the implementation of ICD-10 was discussed. Both Centre staff attended a WHO ‘train the trainer’ course on ICD-10 at Southampton University, England. Because the publication of ICD-10 by WHO has been delayed, training courses for Australia and the Western Pacific Region have been postponed until at least the second half of 1993.

An essential activity of a Reference Centre is the collection and dissemination of information about health classification systems. Literature and resources are being collected from both national and international sources. This activity involves developing a comprehensive database of health classification systems, collecting copies of classifications and nomenclatures (including historical material), and receiving and collecting copies of journals, journal
articles, newsletters and bulletins related to health classification systems and their use.

Standardised, comparable and accurate coded health information is essential to the improved management of health services in Australia. The Centre will play a pivotal role in the development of better health information systems in Australia.

The Centre plans to publicise its activities and invite use of its reference material through a regular newsletter.

The staff of the Centre presented a seminar to the Queensland Branch of ABS on ICD-10 and progress in the United Kingdom toward automating cause of death coding. Further workshops are planned for other cities. Staff are preparing a paper on the potential application of the UK Read Codes in Australian health information systems.

In its four months of operation this year, NRCCH has been acknowledged by national and international organisations as a much needed facility to deal with:

- health classification;
- preparation for the introduction of ICD-10;
- development of automated cause of death and morbidity coding;
- coder training and measurement of competencies; and
- development of improved classification systems and the use of coded data for casemix and quality improvement in health services.
Collaborating Centres

The Institute is developing a network of Collaborating Centres as a means of expanding its capacity to fulfil its statutory functions. Both established and developing groups whose work can contribute to the Institute’s objectives may qualify for designation as AIHW Collaborating Centres. AIHW Collaborating Centres may contribute technical expertise, information, services, research and training to assist the Institute.

Designation is made with the agreement of the head of the establishment to which the group is attached or, if it is an independent institution or agency, with its director.

Approval must also be obtained from the Board of AIHW. AIHW Collaborating Centres are designated for an initial period of three years, which may be renewed subject to review at the end of the initial period.

Designation does not necessarily imply financial support being given to a Collaborating Centre by AIHW.

The Institute has entered into formal collaborative arrangements with four institutions for work on particular topics:

**Hunter Health Statistics Unit**

The Institute collaborates with the Hunter Health Statistics Unit in research in health services. This collaboration aims to increase the use and accessibility of hospital separation data and other hospital summary data. The Institute and the Hunter Health Statistics Unit also collaborate in the development of strategies for national monitoring of cardiovascular disease.

During the year the Health Services Division worked with the Hunter Health Statistics Unit on the analysis of trends in the use and cost of hospital services.

**Designated units of St Vincent's Hospital, Melbourne**

The Institute continued to collaborate with the hospital on a trial of biliary lithotripsy for treatment of gallstones. A second interim report on the trial was prepared.

Staff at the hospital provided assistance for a project on cardiac imaging technologies and preliminary discussion was held on evaluation of teleradiology.

**Australian Centre for Medical Laser Technology, Adelaide**

An overview of lasers in medicine was developed over the year in collaboration with the Centre and is close to completion. The Institute and the Centre continued to coordinate a trial on the use of lasers in the treatment of port wine stains.
A major joint paper was prepared on maximising the impact of health technology assessment. A project on the cost of nutrition and related disease was undertaken and the Institute continued to liaise with the Centre on a cost utility study on biliary lithotripsy.
CORPORATE SERVICES

Head: Mr Peter White, AM

The Corporate Services Division provides a range of specialist administrative and technical support services to the Institute and its external units. It serves as a focus for corporate and strategic planning, coordinates the Institute's statutory and protocol responsibilities and controls the Institute's substantial commitment to information management and technology.

The Technical Support Section was closely integrated with the Information Services Unit in 1991-92. This reflects a strategic commitment to client service and corporate data management as the focus of information management within the Institute.

Preparation for the incorporation of the Institute's new Welfare Division provided an opportunity for a major strategic review of information technology within the Institute and for an appraisal of its ability to support longer term corporate directions. The Institute is seeking to maximise its ability to electronically liaise and interface with a diverse and widely distributed provider and client base.

As a result of this review, the Institute is to replace its present obsolescent office automation technology with a distributed computing system based primarily on Apple Macintosh workstations and operating in a local area network configuration. In addition to providing a more productive office automation environment, the project includes an essential upgrade to and improvement of the data processing, analysis and storage facilities available to research divisions. Purchase of equipment and migration to the new environment will commence early in the 1992-93 financial year.

The Information Services Unit is responsible for managing the Institute's data holdings. The Unit establishes and maintains a broad range of policies and procedures for the storage and release of data with due regard to legal and ethical constraints and confidentiality conditions specified by data providers.

During the year the Institute produced a major policy paper entitled 'Policies and Procedures for Security and Confidentiality of Data held by the AIH'. The paper was endorsed by the Board and circulated to State and Territory health authorities for comment. The policies are subject to ongoing review to ensure that they continue to meet the requirements of ethical, privacy and other relevant guidelines. Staff and outside researchers working on Institute projects are now required to sign undertakings of confidentiality.
The Institute has made some progress towards the management of its data holdings within a single corporate framework, although efforts have been somewhat constrained by conflicting priorities of staffing. The major databases currently maintained by the Institute are:

1. AIDS and related deaths
2. National Aboriginal health statistics
3. National Cancer Statistics Clearing House
4. National Death Index
5. Mortality data
6. National Health Labourforce Collection
7. Hospital morbidity data
8. Hospital Utilisation and Costs Study (HUCS) data

Appendix 9 shows a list of national databases held by the Institute.

The Technical Support Section operates and manages the Institute’s computing and communications systems. It provides technical support to users, develops recommendations for computer equipment acquisitions, develops and implements the information technology plan and manages the PABX system.

The current IT environment comprises two VAX Local Area Clusters. One cluster comprises a VAX 6210, MicroVAX 3900, MicroVAX 3800 and MicroVAX 2. The second cluster consists of five VAXstation 3100s for desktop publishing using Interleaf software. Both clusters use the VAX/VMS operating system. In addition, there is a small number of personal computers, used primarily for PC media to VAX data transfers, CD-ROM access, and scanning tasks. All staff use office automation facilities, including electronic mail, provided by Digital’s ALL-IN-1 software.

The Publications Unit is responsible for editing, producing, printing and distributing Institute publications. It also provides editorial assistance to the Institute’s external units as required. The Unit is an Institute contact point for enquiries, particularly those from the media.

Highlights of 1991–92 included:

- increased productivity in terms of the number of publications produced;
- a major improvement in the appearance and common corporate identity of AIHW publications; and
- the establishment of a corporate newsletter (AIH News, now AIHW News).

A new Institute logo was developed to reflect the Institute’s name change, and as part of the effort to improve and standardise the corporate identity of AIHW publications.
The Unit's desktop publishing software is currently under review as part of the Institute's wider review of its IT environment.

The Institute's publications output for 1990–91 is at Appendix 5. A publications catalogue is produced and is shown at Appendix 11.

**Library**

The AIHW Library provides a reference and research facility primarily for use by Institute staff. A significant number of reference queries are also received from outside the organisation and the Institute has a reciprocal borrowing arrangement with the Australian National University. The Library aims to collect extensively in the area of health statistics, health economics, and health services.

Services offered by the Library include on-line access to a number of databases including MEDLINE, DIALOG, OZLINE and HEALTHNET. Access to ABN (the Australian Bibliographic Network) and the catalogue of the Australian National University is also supported.

In keeping with the Institute's expanded role, the Library is now developing a core collection covering the broad subject area of welfare services. The collection is weighted towards journals and government reports from relevant Australian authorities. A reciprocal capacity for publications exchange has been negotiated with a number of international bodies.

**Administrative services**

The Administrative Services Unit is responsible for managing the Institute's financial and other resources. It provides the following services:

- advice to management and functional areas on finance, staffing and resource issues;
- production and distribution of financial and staffing reports, and preparation of the annual financial statements;
- maintenance and improvement of accommodation and the integrity of the Institute's physical security; and
- maintenance of responsible and consistent personnel management practices and procedures.

**Accommodation**

The Institute's tenure at its Acton Peninsula site remains uncertain in view of the closure of Royal Canberra Hospital and ACT Government uncertainty about the longer term future of the site. Negotiation with the ACT Government about the general standard of the Bennett House accommodation and the likely availability of the site on a longer term basis is continuing.

**Corporate planning and staff development**

During 1991–92, in accordance with the recommendations of the Committee which reviewed the Institute in 1991, the Institute strengthened its corporate planning with a view to integrating equal employment opportunity, human resource development and mainstream strategic planning within a single coordinated
framework. This process provided an invaluable opportunity to implement the APS Senior Officers' Performance Appraisal process as a component of this integrated approach. Developmental work on the new planning framework and its subordinate plans is well advanced and will be fully implemented during 1992–93.

Delayed passage through Parliament of the amendments to the Act placed a significant end of financial year strain on financial and personnel administration of AIHW and also affected the timing of the corporate planning process.

The role of the Secretariat is to provide the Director and the Institute with administrative and executive assistance to ensure that statutory and legislative requirements and broad Institute goals are met, particularly in relation to the activities of the Board and committees of the Institute.

Secretariat services are also provided to major AIHW conferences, meetings, seminars and public consultations.

The Secretariat coordinates Institute liaison with the Minister’s Office, the Department of Health, Housing and Community Services, and other departments and agencies.

Secretariat staff also assist in the administration of the provisions of the *Australian Institute of Health and Welfare Act 1987*, the *Australian Institute of Health Amendment Act 1992*, the *Privacy Act 1988* and its associated Guidelines for the Protection of Privacy in the Conduct of Medical Research, and the *Freedom of Information Act 1982*.

Matters such as amendments to legislation, undertakings of confidentiality and policy guidelines, are a Secretariat responsibility.

The major activities of the Secretariat during the year included work associated with:

- drafting of the legislation for the amended AIHW Act;
- the changeover to a new Board;
- the expanded activities of the Institute’s Ethics Committee;
- liaison with the Minister and Parliamentary Secretary; and
- coordination of the Institute’s Annual Report.
APPENDIX 1

Finance

Audit report on financial statements

Scope
I have audited the financial statements of the Australian Institute of Health and Welfare for the year ended 30 June 1992. The statements comprise:

- statement by the Chairperson and the Director
- operating statement
- statement of financial position
- statement of cash flows, and
- notes to and forming part of the financial statements.

The Institute's members are responsible for the preparation and presentation of the financial statements and the information they contain. I have conducted an independent audit of the financial statements in order to express an opinion on them to the Minister for Health, Housing and Community Services.

The audit has been conducted in accordance with Australian National Audit Office Auditing Standards, which incorporate the Australian Auditing Standards, to provide reasonable assurance as to whether the financial statements are free of material misstatement. Audit procedures included examination, on a test basis, of evidence supporting the amounts and other disclosures in the financial statements, and the evaluation of accounting policies and significant accounting estimates. These procedures have been undertaken to form an opinion whether, in all material respects, the financial statements are presented fairly in accordance with Australian accounting concepts and standards and statutory requirements so as to present a view of the Institute which is consistent with my understanding of its financial position and the results of its operations.

As disclosed in Note 12 to the financial statements, the Institute has not applied the recoverable amount test for valuation of non-current assets. This is in accordance with an exemption provided under the Guidelines for Financial Statements of Public Authorities and Commercial Activities. I agree with this departure from Australian Accounting Standard, AAS10, 'Accounting for the Revaluation of Non-current Assets'. Application of the recoverable amount test would be misleading because a reduction in the valuation based on the ability of the non-current assets to generate net cash inflows from their continued use and subsequent disposal does not represent a decline in the service value of these assets.

The audit opinion expressed in this report has been formed on the above basis.
Appendix 1

Audit opinion

In accordance with section 24 of the Australian Institute of Health and Welfare Act 1987, I now report that the statements are in agreement with the accounts and records of the Institute, and in my opinion:

(i) the statements are based on proper accounts and records
(ii) the statements show fairly the financial transactions for the year ended 30 June 1992 and the state of affairs of the Institute at that date
(iii) the receipt, expenditure and investment of moneys, and the acquisition and disposal of assets, by the Institute during the year have been in accordance with the Australian Institute of Health and Welfare Act 1987, and
(iv) the statements are in accordance with the Guidelines for Financial Statements of Public Authorities and Commercial Activities, which require compliance with Statements of Accounting Concepts and applicable Accounting Standards.

RW Alfredson
Executive Director
Australian National Audit Office
Canberra
22 October 1992
Financial statements
for the year ended 30 June 1992

Certificate
In our opinion, the accompanying statements of the Australian Institute of Health and Welfare consisting of:
- operating statement
- statement of financial position
- statement of cash flows
- notes to and forming part of the financial statements
which have been made out in accordance with the Guidelines for Financial Statements of Public Authorities and Commercial Activities issued by the Minister for Finance:
(a) show fairly the Institute's operating result for the year ended 30 June, 1992;
(b) show fairly the Institute's financial position as at 30 June 1992;
(c) show fairly the Institute's cash flows during the 1991–92 financial year.

## CASH FLOWS FROM OPERATING ACTIVITIES

**Inflows:**
- Grants 1,976,055
- Miscellaneous revenue 20,623
- Interest received 66,077

**Outflows:**
- Salaries (3,588,293)
- Administration expenses (1,801,316)
- Research and development (607,378)

Net cash provided or used by operating activities 21 (3,934,232)

## CASH FLOWS FROM INVESTING ACTIVITIES

**Inflows:**
- Proceeds from sale of property, plant and equipment 6,170

**Outflows:**
- Payments for purchase of property, plant and equipment (128,296)

Net cash provided or used in investing activities (122,126)

## CASH FLOWS FROM GOVERNMENT

**Inflows:**
- Parliamentary appropriation 4,950,000

Net cash provided or used by Government 4,950,000

Net increase or decrease in cash held 893,642

Cash at beginning of reporting period 1,109,071

Cash at end of reporting period 5 2,002,713

The accompanying notes form an integral part of these financial statements
Notes to and forming part of the financial statements
for the year ended 30 June 1992

1. Statement of significant accounting policies
The significant accounting policies adopted by the Australian Institute of Health & Welfare are stated to assist in a general understanding of these financial statements. These policies have been consistently applied except as otherwise indicated.

(a) Statutory requirements
The financial statements are prepared in accordance with Section 24(1) of the Australian Institute of Health & Welfare Act 1987. The form of the financial statements is in accordance with the Guidelines for Financial Statements of Public Authorities and Commercial Activities issued by the Minister for Finance.

(b) Basis of accounting
The financial statements are prepared on an accrual accounting basis, are in accordance with historical cost principles and do not take account of changing money values.

(c) Income tax
The Institute is exempt from income tax imposed under any law of the Commonwealth or of a State or Territory by Section 26 of the Australian Institute of Health & Welfare Act 1987.

(d) Property, plant and equipment
Fixed assets, including leasehold improvements, are depreciated over their estimated useful lives, with depreciation commencing from the date of acquisition. The straight-line method of depreciation is used.

Any gain or loss on disposal of fixed assets is included in the result of the Institute in the year of disposal.

Assets valued at $500 or greater than $500 are capitalised. Items under $500 are expensed under the relevant expense category in the year of acquisition.

(e) Grant income
The recognition of grant income is based on the total of the grant receipts that have been expensed during the year. Any remaining funds at year end are recorded as income in advance.

(f) Employee benefits
These provisions relate to annual leave and long service leave and have been calculated on the basis of pro-rata entitlements under appropriate awards, based on current wages. Long service leave is provided for all employees with 10 years or more eligible service or after 1 years service where the employee has attained the minimum retiring age. The provisions comprise current and non-current portions, with the current provision being the amount expected to be paid within the next 12 months.
Appendix 1

(g) Segment reporting
In terms of the provisions of Australian Accounting Standard AAS 16: Financial Reporting by Segments, the Institute’s activities relate to a single industry—health and welfare statistics and research.

(h) Resources provided free of charge
The Department of Health, Housing and Community Services (DHHCS) provides administrative support to the Institute for the maintenance of its personnel records. No charge is made to the Institute for this service.

(i) Comparative figures
In February 1992, the Department of Finance issued revised Guidelines for Financial Statements of Public Authorities and Commercial Activities, which have been adopted for 1991–92. Certain terminology and comparative amounts have been reclassified to conform with the revised disclosures required by those Guidelines.

2. Superannuation
Staff at the Institute contribute to the Commonwealth superannuation schemes. Employer contributions are met by the Commonwealth.
### 3. Administration expenses

An exemption has been provided under the Guidelines for Financial Statements of Public Authorities and Commercial Activities such that ‘not-for-profit’ entities are not required to apply the recoverable amount test specified in Australian Accounting Standard AAS10 ‘Accounting for the Revaluation of Non-current Assets’. For those entities, including the Institute, the test must still be applied to assets which are meant to generate net cash inflows. For other assets, their carrying value should reflect their remaining service potential to the entity.

Application of the recoverable amount test would cause the value of the Institute’s non-current assets to equate to their disposal value, as the entity does not generate cash inflows from the asset’s continued use. Applying the recoverable amount test would cause the financial statements not to show a fair view, as the service potential of the assets equate to their written down historical cost rather than their disposal value.

</table>
Appendix 1

The Institute has a lease rental agreement with the ACT Accommodation Service for use of office space at Bennett House, Royal Canberra Hospital. This lease agreement may be terminated by either party giving to the other 6 months notice in writing. The commitment represents 6 months rental payable on termination of the lease.

18. Contingent liabilities
The Institute is not aware of any material contingent liabilities at 30 June 1992 (Nil in 1990–91).

19. Parliamentary appropriations

<table>

20. Executive remuneration
Two executives received remunerations of more than $100,000 during 1991–92. The aggregate amount of remuneration for these positions was $227,042 (1990–91—$117,014).

Disclosed by the number of executives receiving remunerations in the following bands:

- $100,000–$110,000: 1
- $110,000–$120,000: 1
- $120,000–$130,000: 1

21. Statement of cash flows

This note provides a reconciliation of net cash provided or used by operating activities to the change in net assets resulting from operations as shown in the operating statement. Comparative figures are not available for the 1990-91 financial year.

Legislation

The Institute was established as a statutory authority in 1987 by the then Australian Institute of Health Act 1987. There have been two major amendments to the Act, the first in 1989 and the second in 1992. The 1989 amendments strengthened the safeguards of confidentiality in section 29. The 1992 amendment expanded the Institute’s role and functions to include welfare-related information and statistics. The Act is now known as the Australian Institute of Health and Welfare Act 1987. An unofficial consolidation of the Institute Act, including all amendments to the Act, is reproduced here.

Australian Institute of Health Ethics Committee regulations
Regulations have been made pursuant to subsections 16(1) and (2) of the Australian Institute of Health Act 1987, prescribing the functions and composition of the Australian Institute of Health Ethics Committee. The Regulations are reproduced on page 76.

An Act to establish an Australian Institute of Health and Welfare, and for related purposes

[Assented to 5 June 1987]

BE IT ENACTED by the Queen, and the Senate and the House of Representatives of the Commonwealth of Australia, as follows:

PART 1—PRELIMINARY

Short title
1. This Act may be cited as the Australian Institute of Health and Welfare Act 1987.

Commencement
2. This Act shall come into operation on a day to be fixed by Proclamation.

Interpretation
3. (1) In this Act, unless the contrary intention appears:
   “appoint” includes re-appoint;
   “Chairperson” means the Chairperson of the Institute;
   “Director” means the Director of the Institute;
   “Ethics Committee” means the Health Ethics Committee of the Australian Institute of Health and Welfare;
   “health-related information and statistics” means information and statistics collected and produced from data relevant to health or health services;
   “Institute” means the Australian Institute of Health and Welfare;
   “member” means a member of the Institute;
   “production” means compilation, analysis and dissemination;
   “State Health Minister” means:
   (a) the Minister of the Crown for a State;
   (b) the Minister of the Australian Capital Territory; or
   (c) the Minister of the Northern Territory;
   who is responsible, or principally responsible, for the administration of matters relating to health in the State, the Australian Capital Territory or the Northern Territory, as the case may be;
   “State Housing Department” means the Department of State of a State or Territory that deals with matters relating to housing in the State or Territory.
   “State Housing Minister” means:
   (a) the Minister of the Crown for a State; or
   (b) the Minister of the Australian Capital Territory; or
   (c) the Minister of the Northern Territory;
who is responsible, or principally responsible, for the administration of matters relating to housing in the State or Territory, as the case may be;

"State Welfare Minister" means:
(a) the Minister of the Crown for a State; or
(b) the Minister of the Australian Capital Territory; or
(c) the Minister of the Northern Territory;
who is responsible, or principally responsible, for the administration of matters relating to welfare in the State or Territory, as the case may be;

"trust money" means money received or held by the Institute on trust;
"trust property" means property received or held by the Institute on trust.

"welfare-related information and statistics" means information and statistics collected and produced from data relevant to the provision of welfare services;

"welfare services" includes:
(a) aged care services; and
(b) child care services (including services designed to encourage or support participation by parents in educational courses, training and the labour force); and
(c) services for people with disabilities; and
(d) housing assistance (including programs designed to provide access to secure housing in the long term and programs to provide access to crisis accommodation in the short term); and
(e) child welfare services (including, in particular, child protection and substitute care services); and
(f) other community services.

(2) A reference in this Act to the Chairperson, the Director or a member, in relation to a time when a person is acting in the office of Chairperson, Director, or a member, includes a reference to that person.

(3) The Chairperson may be referred to as the Chairman or Chairwoman, as the case requires.

PART II—AUSTRALIAN INSTITUTE OF HEALTH AND WELFARE

Division 1—Establishment, Functions and Powers of Institute

Establishment of Institute

4. (1) There is hereby established a body to be known as the Australian Institute of Health and Welfare.

(2) The Institute:
(a) is a body corporate with perpetual succession;
(b) shall have a common seal; and
(c) may sue and be sued in its corporate name.

(3) All courts, judges and persons acting judicially shall take judicial notice of the imprint of the common seal of the Institute affixed to a document and shall presume that it was duly affixed.

Functions of Institute

[Institute to have health-related and welfare-related functions]

(1AA) The functions of the Institute are:
(a) the health-related functions conferred by subsection (1); and
(a) the welfare-related functions conferred by subsection (1A).

5. (1) The Institute’s health-related functions are:
(a) to collect, with the agreement of the Australian Bureau of Statistics and, if necessary, with the Bureau's assistance, health-related information and statistics, whether by itself or in association with other bodies or persons; and

(b) to produce health-related information and statistics, whether by itself or in association with other bodies or persons; and

(c) to co-ordinate the collection and production of health-related information and statistics by other bodies or persons; and

(d) to provide assistance, including financial assistance, for the collection and production of health-related information and statistics by other bodies or persons;

(e) to develop methods and undertake studies designed to assess the provision, use, cost and effectiveness of health services and health technologies;

(f) to conduct and promote research into the health of the people of Australia and their health services;

(g) to develop, in consultation with the Australian Bureau of Statistics, specialised statistical standards and classifications relevant to health and health services, and advise the Bureau on the data to be used by it for the purposes of health-related statistics;

(h) subject to section 29, to enable researchers to have access to health-related information and statistics held by the Institute or by bodies or persons with whom contracts or arrangements have been entered into by the Institute;

(i) to publish methodological and substantive reports on work carried out by or in association with the Institute under this subsection;

(3) This section is not intended to limit the functions of the Australian Bureau of Statistics.

[Welfare-related functions]

(1A) The Institute's welfare-related functions are:

(a) to collect, with the agreement of the Australian Bureau of Statistics and, if necessary, with the Bureau's assistance, welfare-related information and statistics (whether by itself or in association with other bodies or persons); and

(b) to produce welfare-related information and statistics (whether by itself or in association with other bodies or persons); and

(c) to co-ordinate the collection and production of welfare-related information and statistics by other bodies or persons; and

(d) to provide assistance (including financial assistance) for the collection and production of welfare-related information and statistics by other bodies or persons;

(e) to develop, in consultation with the Australian Bureau of Statistics, specialised statistical standards and classifications relevant to welfare services; and

(f) subject to section 29, to enable researchers to have access to welfare-related information and statistics held by the Institute or by bodies or persons with whom contracts or arrangements have been entered into by the Institute; and

(g) to publish methodological and substantive reports on work carried out by or in association with the Institute under this subsection; and

(h) to do anything incidental to the functions conferred by paragraphs (a) to (g).
Appendix 2

Powers of Institute

6. The Institute has power to do all things necessary or convenient to be done for or in connection with the performance of its functions and, in particular, has power:
(a) to enter into contracts or arrangements, including contracts or arrangements with bodies or persons to perform functions on behalf of the Institute;
(b) to acquire, hold and dispose of real or personal property;
(c) to occupy, use and control any land or building owned or held under lease by the Commonwealth and made available for the purposes of the Institute;
(d) to appoint agents and attorneys and act as an agent for other persons;
(e) to accept gifts, grants, devises and bequests made to the Institute, whether on trust or otherwise, and to act as trustee of money or other property vested in the Institute on trust;
(f) subject to section 29, to:
   (i) release data to other bodies or persons; and
   (ii) publish the results of any of its work; and
(g) to do anything incidental to any of its powers.

Directions by Minister

7. (1) The Minister may, by notice in writing delivered to the Chairperson, give a direction to the Institute with respect to the performance of its functions or the exercise of its powers.
   (1A) The Minister must consult the Chairperson before giving any direction to the Institute.
   (1B) The Minister must consult each State Health Minister before giving the direction if the direction relates to the Institute’s health-related functions.
   (1C) The Minister must consult each State Welfare Minister before giving the direction if the direction:
      (a) relates to the Institute’s welfare-related functions; and
      (b) does not concern housing matters.
   (1D) The Minister must consult each State Housing Minister before giving the direction if the direction:
      (a) relates to the Institute’s welfare-related functions; and
      (b) concerns housing matters.
(2) The Institute shall comply with any direction given under subsection (1).

Division 2—Constitution and Meetings of Institute

Constitution of Institute

8. (1) Subject to subsection (2), the Institute shall consist of the following members:
(a) the Chairperson;
(b) the Director;
(c) a member nominated by the Australian Health Ministers’ Advisory Council;
(ca) a member nominated by the Standing Committee of Social Welfare Administrators;
(cb) a representative of the State Housing Departments nominated in the manner determined by the Minister;
(d) the Australian Statistician;
(e) the Secretary to the Department;
(f) a person:
   (i) who has knowledge of the needs of consumers of health services; and
(ii) whose nomination has been recommended by a body that is referred to in the Schedule and that represents consumers of health services; and

(iii) who has been nominated by the Minister;

(fa) a person:
   (i) who has knowledge of the needs of consumers of welfare services; and
   (ii) whose nomination has been recommended by a body that is referred to in the Schedule and that represents consumers of welfare services; and
   (iii) who has been nominated by the Minister;

(fb) a person:
   (i) who has knowledge of the needs of consumers of housing assistance services; and
   (ii) whose nomination has been recommended by a body that is referred to in the Schedule and that represents consumers of housing assistance services; and
   (iii) who has been nominated by the Minister;

(fc) a person:
   (i) who has expertise in research into public health issues; and
   (ii) whose nomination has been recommended by a body that is referred to in the Schedule and that is a peak body promoting research into public health issues; and
   (iii) who has been nominated by the Minister;

(g) 3 other members nominated by the Minister;

(h) a member of the staff of the Institute elected by that staff.

(1A) A recommendation for the purposes of paragraph (1)(f), (fa), (fb) or (fc):
   (a) may be made by one or more bodies; and
   (b) may contain one or more names.

(2) If the person referred to in paragraph (1) (d) or (e) is not available to serve as a member of the Institute, that person shall nominate a person to be a member of the Institute in lieu of himself or herself.

(3) The performance of the functions, or the exercise of the powers, of the Institute is not affected by reason only of:
   (a) a vacancy in the office of a member referred to in paragraph (1) (a), (b), (f), (fa), (fb), (fc) or (h);
   (b) the number of members referred to in paragraph (g) falling below 3 for a period of not more than 6 months.
   (ba) a vacancy of not more than 6 months duration in the office of a member referred to in paragraph (1)(c), (ca) or (cb);
   (c) a vacancy in the office of the member referred to in paragraph (1) (d) or (e) or the member (if any) nominated in lieu of that member under subsection (2).

(4) The following subsections have effect in relation to a member other than a member referred to in paragraph (1) (b), (d) or (e).

(5) Subject to this section, a member shall be appointed by the Governor-General.

(5A) Subject to this Act, a member referred to in paragraph (1)(a), (c), (ca), (cb), (f), (fa), (fb), (fc) or (g) may be appointed on a full-time or a part-time basis and holds office for such period, not exceeding 3 years, as is specified in the instrument of appointment.

(5B) Subject to this Act, a member elected under paragraph (1)(h) holds office on a part-time basis for a period of one year commencing on:
   (a) the day on which the poll for the election of the member is held; or
   (b) if that day occurs before the expiration of the term of office of the person whose place the member fills—the day after the expiration of that term.
Appendix 2

(6) A person who has attained the age of 65 years shall not hold office as a member on a full-time basis.

(7) A member holds office on such terms and conditions (if any) in respect of matters not provided for by this Act as are determined by the Governor-General.

(8) The appointment of a member is not invalid because of a defect or irregularity in connection with the member's nomination or appointment.

Acting members

9. (1) The Minister may appoint a person to act in the office of Chairperson, of Director, or of member (other than the Chairperson or Director):
   (a) during a vacancy in the office, whether or not an appointment has previously been made to the office; or
   (b) during any period, or during all periods, when the holder of the office is absent from duty or from Australia or is, for any other reason, unable to perform the functions of the office; but a person appointed to act during a vacancy shall not continue so to act for more than 12 months.

(2) A person may resign appointment under this section by instrument in writing delivered to the Minister.

(3) An appointment may be expressed to have effect only in such circumstances as are specified in the instrument of appointment.

(4) The Minister may:
   (a) determine the terms and conditions of appointment, including remuneration and allowances, if any, of a person acting under subsection (1); and
   (b) terminate such an appointment at any time.

(5) Where a person is acting in an office and the office becomes vacant while that person is so acting, then, subject to subsection (3), the person may continue so to act until the Minister otherwise directs, the vacancy is filled or a period of 12 months from the date on which the vacancy occurred expires, whichever first happens.

(6) While a person is acting in an office, the person has and may exercise all the powers, and shall perform all the functions and duties, of the holder of the office.

(7) Anything done by or in relation to a person purporting to act under this section is not invalid by reason only that:
   (a) the occasion for the appointment of the person had not arisen;
   (b) there was a defect or irregularity in or in connection with the appointment;
   (c) the appointment had ceased to have effect; or
   (d) the occasion for the person to act had not arisen or had ceased.

Remuneration and allowances

10. (1) Unless otherwise prescribed, a member shall be paid such remuneration as is determined by the Remuneration Tribunal.

(2) A member shall be paid such allowances as are prescribed.

(3) This section has effect subject to the Remuneration Tribunal Act 1973.

Leave of absence

11. (1) Subject to Section 87E of the Public Service Act 1922, a full-time member has such recreation leave entitlements as are determined by the Remuneration Tribunal.

(2) The Minister may:
(a) grant a full-time member leave of absence, other than recreation leave, on such terms and conditions as to remuneration or otherwise as the Minister determines; and

(b) grant a part-time member leave of absence on such terms and conditions as to remuneration or otherwise as the Minister determines.

**Resignation**

12. A member may resign by instrument in writing delivered to the Governor-General.

**Termination of appointment**

13. (1) The Governor-General may terminate the appointment of a member because of misbehaviour or physical or mental incapacity.

(2) If a member:

(a) becomes bankrupt, applies to take the benefit of any law for the relief of bankrupt or insolvent debtors, compounds with creditors or assigns remuneration for their benefit;

(b) without reasonable excuse, contravenes section 14;

(c) being a full-time member who is paid remuneration under this Part:
   (i) engages in paid employment outside his or her duties without the consent of the Minister; or
   (ii) is absent from duty, without leave of absence for 14 consecutive days or for 28 days in any period of 12 months; or

(d) being a part-time member, is absent, without leave by the Minister, from 3 consecutive meetings of the Institute;

the Governor-General may terminate the appointment of the member.

(3) Where:

(a) a member has been appointed under paragraph 8(1)(c), (ca) or (cb) or subsection 8(2) on the nomination of a body or person referred to in that paragraph or subsection, as the case may be, and the body or person notifies the Minister in writing that the nomination is withdrawn; or

(b) a member has been appointed under paragraph 8(1)(g) on the nomination of the Minister and the Minister withdraws his or her nomination of the member; or

(c) a member has been elected under paragraph 8(1)(h) and the member ceases to be a member of the staff of the Institute.

the Governor-General shall terminate the appointment of the member.

**Disclosure of interest**

14. (1) A member who has a direct or indirect interest, pecuniary or otherwise, in a matter being considered or about to be considered by the Institute, being an interest that would conflict with the proper performance of the member's functions in relation to the consideration of the matter, shall, as soon as practicable after the relevant facts have come to the knowledge of the member, disclose the nature of the interest at a meeting of the Institute.

(2) A disclosure under subsection (1) shall be recorded in the minutes of the meeting.

(3) This section does not apply to an interest of a member referred to in paragraph 8(1)(c), (ca), (cb) or (h) or a member nominated under subsection 8(2), being an interest that the member has by reason only of having been nominated by a body or person referred to in that paragraph or subsection.

**Meetings**

15. (1) Subject to this section, meetings of the Institute shall be held at such times and places as the Institute determines.
Appendix 2

(2) The Institute shall meet at least once every 4 months.
(3) The Chairperson:
(a) may at any time convene a meeting; and
(b) shall convene a meeting on receipt of a written request signed by not fewer than 3 members.
(4) The Minister may convene such meetings as the Minister considers necessary.
(5) At a meeting:
(a) if the Chairperson is present, the Chairperson shall preside;
(b) if the Chairperson is absent, the members present shall appoint one of their number to preside;
(c) a majority of the members for the time being constitute a quorum;
(d) all questions shall be decided by a majority of the votes of the members present and voting; and
(e) the member presiding has a deliberative vote and, if necessary, also has a casting vote.
(6) The Institute shall keep minutes of its proceedings.
(7) The Institute shall regulate the procedure of its meetings as it thinks fit.

Division 3—Committees of Institute

Committees
16. (1) The Institute shall appoint a committee to be known as the Health Ethics Committee of the Australian Institute of Health and Welfare.
(2) The functions and composition of the Ethics Committee shall be as prescribed.
(3) Regulations shall not be made for the purpose of subsection (2) except in accordance with a recommendation of the National Health and Medical Research Council.
(4) The Institute may appoint such other committees as it thinks fit to assist it in performing its functions.
(5) The functions and composition of a committee appointed under subsection (4) shall be as determined from time to time in writing by the Institute.
(6) The succeeding subsections of this section apply in relation to a committee appointed under subsection (1) or (4).
(7) The members of a committee may include members of the Institute.
(8) A member of a committee holds office for such period as is specified in the instrument of appointment.
(9) A member of a committee may resign by instrument in writing delivered to the Institute.
(10) Except where the Minister otherwise directs in writing, a member of a committee shall be paid such remuneration as is determined by the Remuneration Tribunal.
(11) A member of a committee (other than a member of the Institute) shall be paid such allowances as are prescribed.
(12) Subsections (9) and (10) have effect subject to the Remuneration Tribunal Act 1973.
(13) Section 14 applies in relation to a committee as if:
(a) references in that section to a member were references to a member of the committee; and
(b) references in that section to the Institute were references to the committee.

Division 4—Director of Institute

Director of Institute
17. (1) There shall be a Director of the Institute.
(2) The Director shall be appointed by the Minister on the recommendation of the Institute.
(3) The Director shall be appointed on a full-time or part-time basis for such period, not exceeding 5 years, as is specified in the instrument of appointment.
(5) The Director holds office on such terms and conditions (if any) in respect of matters not provided for by this Act as are determined by the Minister.
(6) The appointment of the Director is not invalid because of a defect or irregularity in connection with the appointment or the recommendation by the Institute.
(7) The Director shall not be present during any deliberation, or take part in any decision, of the Institute with respect to the appointment of the Director.
(8) Sections 11 and 14 apply to the Director.
(9) Sections 12 and 13 apply to the Director as if references in those sections to the Governor-General were references to the Minister.

**Functions of Director**

18. (1) The Director shall manage the affairs of the Institute subject to the directions of, and in accordance with policies determined by, the Institute.
(2) All acts and things done in the name of, or on behalf of, the Institute by the Director shall be deemed to have been done by the Institute.

**Division 5—Staff**

Staff

19. (1) The staff required for the purposes of this Act shall be—
(a) persons appointed or employed under the *Public Service Act 1922*; and
(b) persons appointed or employed by the Institute.
(2) The Director has all the powers of a Secretary under the *Public Service Act 1922*, so far as those powers relate to the branch of the Public Service comprising the staff referred to in paragraph (1)(a), as if that branch were a separate Department of the Public Service.
(3) The Institute may engage as advisers or consultants persons having suitable qualifications and experience.
(4) The terms and conditions of appointment or employment of members of the staff referred to in paragraph (1)(b) are such as are determined by the Institute.
(5) The terms and conditions of engagement of advisers or consultants are such as are determined by the Institute.

**PART III—FINANCE**

Money to be appropriated by Parliament

20. (1) There is payable to the Institute such money as is appropriated by the Parliament for the purposes of the Institute.
(2) The Minister for Finance may give directions as to the means in which, and the times at which, money referred to in subsection (1) is to be paid to the Institute.

Estimates

21. (1) The Institute shall:
(a) prepare estimates of the receipts and expenditure of the Institute in such form as the Minister directs for:
   (i) each financial year; and
   (ii) any other period specified by the Minister; and
Appendix 2

(b) lodge estimates with the Minister within such time as the Minister directs.

(2) Estimates under section (1) shall not include estimates of receipts or expenditure of trust money.

(3) The money of the Institute, other than trust money, shall be expended only in accordance with estimates approved by the Minister.

Money of Institute

22. (1) The money of the Institute consists of:

(a) money paid to the Institute under section 20; and

(b) any other money, other than trust money, paid to the Institute.

(2) The money of the Institute shall be applied only:

(a) in payment or discharge of the expenses, charges, obligations and liabilities incurred or undertaken by the Institute in the performance of its functions and the exercise of its powers;

(b) in payment of remuneration and allowances payable under this Act; and

(c) in making any other payments required or permitted to be made by the Institute.

Contracts

23. The Institute shall not, except with the written approval of the Minister:

(a) enter into a contract involving the payment or receipt by the Institute of an amount exceeding $200,000 or such higher amount as is prescribed; or

(b) enter into a lease of land for a period of 10 years or more.

Application of Part XI of Audit Act

24. (1) The Institute is a public authority to which Division 3 of Part XI of the Audit Act 1901 applies.

(2) A report prepared under section 63M of the Audit Act 1901 (as that section applies by virtue of subsection (1)) shall, in respect of each direction given under subsection 7(1) that is applicable to the period to which the report relates, include:

(a) particulars of the direction; or

(b) where the Institute considers that the particulars contain information concerning a person or are of a confidential nature—a statement that a direction was given.

Trust money and trust property

25. (1) The Institute:

(a) shall pay trust money into an account or accounts referred to in subsection 63J(1) of the Audit Act 1901 (as that subsection applies by virtue of subsection 24(1)) containing no money other than trust money;

(b) shall apply or deal with trust money and trust property only in accordance with the powers and duties of the Institute as trustee; and

(c) may only invest trust money:

(i) in any manner in which the Institute is authorised to invest the money by the terms of the trust; or

(ii) in any manner in which trust money may be lawfully invested.

(2) Sections 63K and 63L of the Audit Act 1901 (as those sections apply by virtue of subsection 24(1)) have effect as if:

(a) a reference in those sections to moneys included a reference to trust money;
(b) a reference in those sections to transactions or to transactions and affairs included a reference to transactions, or to transactions and affairs, relating to trust money or to trust property; and
(c) a reference in those sections to assets included a reference to trust property.

Exemption from taxation
26. The income, property and transactions of the Institute are not subject to taxation (including taxation under the Bank Account Debits Tax Act 1982) under any law of the Commonwealth or of a State or Territory.

PART IV—MISCELLANEOUS

Delegation by Institute
27. (1) The Institute may, either generally or as otherwise provided by the instrument of delegation, by writing under its common seal:
(a) delegate to a member;
(b) delegate to a member of the staff of the Institute; and
(c) with the approval of the Minister—delegate to any other person or body; all or any of the Institute’s powers or functions under this Act, other than this power of delegation.
(2) A power or function so delegated, when exercised or performed by the delegate, shall, for the purposes of this Act, be deemed to have been exercised or performed by the Institute.
(3) A delegation does not prevent the exercise of a power or performance of a function by the Institute.

Delegation by Director
28. (1) The Director may, either generally or as otherwise provided by the instrument of delegation, by instrument in writing:
(a) delegate to a member;
(b) delegate to a member of the staff of the Institute; or
(c) with the approval of the Minister—delegate to any other person or body; all or any of the Director’s powers and functions under this Act, other than this power of delegation.
(2) A power or function so delegated, when exercised or performed by the delegate, shall, for the purposes of this Act, be deemed to have been exercised or performed by the Director.
(3) A delegation does not prevent the exercise of a power or performance of a function by the Director.

Confidentiality
29. (1) Subject to this section, a person (in this subsection called "informed person") who has:
(a) any information concerning another person (which person is in this section called an "information subject"), being information acquired by the informed person because of:
(i) holding an office, engagement or appointment, or being employed, under this Act;
(ii) performing a duty or function, or exercising a power, under or in connection with this Act; or
(iii) doing any act or thing under an agreement or arrangement entered into by the Institute; or
(b) any document relating to another person (which person is in this section also called an "information subject"), being a document furnished for the purposes of this Act;

shall not, except for the purposes of this Act, either directly or indirectly:

(c) make a record of any of that information or divulge or communicate any of that information to any person (including an information subject);

(d) produce that document to any person (including an information subject); or

(e) be required to divulge or communicate any of that information to a court or to produce that document in a court.

Penalty: $2,000 or imprisonment for 12 months, or both.

(2) Subject to subsections (2A) and (2B), nothing in this section prohibits:

(a) a person from divulging or communicating information, or producing a document, to the Minister if it does not identify an information subject;

(b) a person from divulging or communicating information, or producing a document, to a person specified in writing by the person (in this subsection called the 'information provider') who divulged or communicated the information, or produced the document, directly to the Institute;

(c) a person from divulging or communicating information, or producing a document, to a person specified in writing by the Ethics Committee if to do so is not contrary to the written terms and conditions (if any) upon which the information provider divulged or communicated the information, or produced the document, directly to the Institute; or

(d) the publication of conclusions based on statistics derived from, or of particulars of procedures used in, the work of the Institute, if:

(i) to do so is not contrary to the written terms and conditions (if any) upon which an information provider divulged or communicated information relevant to the publication, or produced a document relevant to the publication, directly to the Institute; and

(ii) the publication does not identify the information subject.

(2A) Paragraph (2)(c) applies only to information that is health-related information and statistics.

(2B) Paragraph (2)(c) applies to a document only to the extent to which the document contains health-related information and statistics.

(3) A person to whom information is divulged or communicated, or a document is produced, under paragraph (2)(a), (b) or (c), and any person under the control of that person, in respect of that information or document, subject to subsection (1) as if the person were a person exercising powers, or performing duties or functions, under this Act and had acquired the information or document in the exercise of those powers or the performance of those duties or functions.

(4) In this section:

(a) "court" includes any tribunal, authority or person having power to require the production of documents or the answering of questions;

(b) "person" includes a body or association of persons, whether incorporated or not, and also includes:

(i) in the case of an information provider—a body politic; or

(ii) in the case of an information subject—a deceased person;

(c) "produce" includes permit access to;

(d) "publication", in relation to conclusions, statistics or particulars, includes:
(i) the divulging or communication to a court of the conclusions, statistics or particulars; and
(ii) the production to a court of a document containing the conclusions, statistics or particulars; and

(e) a reference to information concerning a person includes:
   (i) a reference to information as to the whereabouts, existence or non-existence of a document concerning a person; and
   (ii) a reference to information identifying a person or body providing information concerning a person.

Restricted application of the Epidemiological Studies (Confidentiality) Act 1981

30. (1) The Epidemiological Studies (Confidentiality) Act 1981 (in this section called the "Confidentiality Act") does not apply to anything done in the exercise of a power or performance of a function under this Act.

(2) Notwithstanding the Confidentiality Act, a person who has assisted, or is assisting in, the conduct of a prescribed study or an epidemiological study may, at the written request of the Institute:
   (a) communicate to the Institute any information acquired by the person because of having assisted, or assisting, in the conduct of that study; and
   (b) give the Institute access to documents prepared or obtained in the conduct of that study.

(3) It is a defence to a prosecution under the Confidentiality Act if it is established that the information was communicated or access to a document was given, as the case may be, in accordance with a written request by the Institute.

(4) In this section:
   (a) "epidemiological study" has the same meaning as in the Confidentiality Act; and
   (b) "prescribed study" has the same meaning as in the Confidentiality Act.

Periodical reports

31. (1) The Institute shall prepare and, as soon as practicable, and in any event within 6 months:
   (a) after 31 December 1987—shall submit to the Minister a health report for the period commencing on the commencement of this Act and ending on that date; and
   (b) after 31 December 1989 and every second 31 December thereafter—shall submit to the Minister a health report for the 2 year period ending on that 31 December.

(1A) The Institute must submit to the Minister:
   (a) as soon as practicable after (and in any event within 6 months of) 30 June 1993, a welfare report prepared by the Institute for the period:
      (i) beginning on the day on which the Australian Institute of Health Amendment Act 1992 commences; and
      (ii) ending on 30 June 1993; and
   (b) as soon as practicable after (and in any event within 6 months of) 30 June 1995 and every second 30 June thereafter, a welfare report for the 2 year period ending on that 30 June.

(2) The Institute may at any time submit to the Minister:
   (a) a health or welfare report for any period; or
   (b) a report in respect of any matter relating to the exercise of the powers, or the performance of the functions, of the Institute or its committees under this Act.

(3) A health report shall provide:
   (a) statistics and related information concerning the health of the people of Australia; and
Appendix 2

(b) an outline of the development of health-related information and statistics by the Institute, whether by itself or in association with other persons or bodies; during the period to which the report relates.

(3A) A welfare report must provide:
(a) statistics and related information concerning the provision of welfare services to the Australian people; and
(b) an outline of the development of welfare-related information and statistics by the Institute, whether by itself or in association with other persons or bodies; during the period to which the report relates.

(4) The Minister shall cause a copy of a report submitted under subsection (1) or (1A) to be laid before each House of the Parliament within 15 sitting days of that House after the day on which the Minister receives the report.

(5) The Minister may cause a copy of a report submitted under subsection (2) to be laid before each House of the Parliament.

Regulations

32. The Governor-General may make regulations, not inconsistent with this Act, prescribing matters required or permitted by this Act to be prescribed.
SCHEDULE 1

NEW SCHEDULE TO PRINCIPAL ACT

SCHEDULE

Subsection 8(1)

BODIES THAT MAY NOMINATE BOARD MEMBERS

Australian Council of Social Service
Australian Hospital Association
Australian Medical Association
Australian Pensioners’ and Superannuants’ Federation
Australian Private Hospitals’ Association
Brotherhood of St Laurence
Catholic Social Welfare Commission
Consumers’ Health Forum of Australia
National Shelter
Public Health Association of Australia
Appendix 2

Australian Institute of Health Ethics Committee Regulations

Citation
1. These Regulations may be cited as the Australian Institute of Health Ethics Committee Regulations.

Interpretation
2. In these Regulations, unless the contrary intention appears:
   "Ethics Committee" means the Australian Institute of Health Ethics Committee referred to in subsection 16(1) of the Act;
   "the Act" means the Australian Institute of Health Act 1987.

Functions
3. The functions of the Ethics Committee are:
   (a) to form an opinion as to the acceptability or otherwise, on ethical grounds, of:
      (i) activities that are being, or it is proposed will be, engaged in by the Institute in the performance of its functions; and
      (ii) activities that are being, or it is proposed will be, engaged in by other bodies or persons in association with, or with the assistance of, the Institute in the performance of its functions;
   having regard, in addition to any other matters that the Ethics Committee considers to be relevant, to the Declaration of Helsinki adopted by the 18th World Medical Assembly, Helsinki, Finland, 1964, as revised by the 29th World Medical Assembly, Tokyo, Japan, 1975 and to any relevant ethical principles and standards formulated or adopted by the National Health and Medical Research Council;
   (b) where appropriate, to revise an opinion so formed or to form another opinion;
   (c) to inform the Institute from time to time of the opinions so formed or as revised and its reasons for forming or revising those opinions; and
   (d) to provide a written annual report of the Ethics Committee’s operations to the Institute.

Composition
4. The Ethics Committee shall consist of the following members:
   (a) the Director of the Institute or his or her nominee;
   (b) a person who is a graduate in medicine of a university and has post-graduate medical research experience;
   (c) a person who is a graduate in a social science of a university, college of advanced education or similar institution and has post-graduate research experience in a social science;
   (d) a person who is the nominee of the Registrar of Births, Deaths and Marriages in the Australian Capital Territory and of the officer of each State and the Northern Territory who has the responsibility in that State or Territory of registering births, deaths and marriages;
   (e) a minister of religion;
   (f) a person who is a barrister, a solicitor, a barrister and solicitor or a legal practitioner, of the High Court or of the Supreme Court of a State or Territory; and
   (g) a man and a woman, neither of whom is a member or employee of the Institute and each of whom is able to represent general community attitudes;
   one of whom shall be appointed chairperson by the Institute.
APPENDIX 3

AIHW Committees

Ethics Committee

The principal responsibilities of the AIHW Ethics Committee are described in the AIHW Ethics Committee Regulations. They are to:

- form an opinion and inform the Institute on the acceptability or otherwise, on ethical grounds, of activities engaged in by the Institute or with which it is in any way associated; and
- provide a written annual report to the Institute.

The Regulations specify the composition of the Committee and section 16 of the AIHW Act provides for members to be appointed by the Institute for such period as is specified in their instrument of appointment. During 1991–92, the Ethics Committee membership was as shown below. The Committee held five meetings during the year. The number of meetings attended by each member is shown in brackets.

Nominee of the Director
Dr John Donovan (5)

Medical Graduate with Research Experience
Emeritus Professor Malcolm Whyte, Chairman (5)

Graduate in a social science
Dr Dorothy Broom (3)

Nominee of the Registrars for Births, Deaths and Marriages
Mr Roger Thomson (3)

Minister of religion
The Reverend Father Thomas Wright (3) (from 23 July 1991)

Legal practitioner
Mr Colin Thomson (4)

Representatives of general community attitudes
Ms Janne Graham (5)
Mr David Purnell (5)

During the year the Committee received 35 submissions and gave certificates of approval to 34, embracing 43 projects. One submission was withdrawn, none was disapproved and one from the previous year remained unresolved.
Appendix 3

No significant ethical issues were raised by 15 of the submissions. Points of contention arose more often in relation to activities being conducted by associated agencies than to activities being conducted by Institute staff. Points of contention were concerned with:

- the requirement for a clear, non-technical, brief yet comprehensive, description of activities;
- the information to be provided to, and consent obtained from, information subjects;
- the propriety and consent of record-keepers or providers in supplying data;
- safeguard for confidentiality;
- approval of local Institutional Ethics Committees; and
- the Privacy Act requirements.

Ethics committees are required to review the ethical situation of projects in progress; however, there has been widespread uncertainty about how this is best achieved. During the year the Committee adopted procedures which it applied to the backlog of projects; for example, monitoring is now up to date and is being carried out routinely, usually by questionnaire annually. These procedures have been forwarded for information to the NHMRC’s Australian Health Ethics Committee, which is producing monitoring guidelines for general distribution.

The Committee has revised a number of papers which, together with other relevant material, it makes freely available to assist researchers in deciding whether and what to submit for ethical review. These include:

(a) guidelines for the preparation of submissions and the assessment of activities;
(b) activities which are generally not of ethical interest (and which, therefore, need not be submitted);
(c) requirements of submissions involving external (‘up stream’) activities; and
(d) Privacy Act requirements of submissions’ and ‘The Information Privacy Principles in Plain English’.

A pamphlet about the Committee and its work is also available for general distribution and a short article was prepared for the August 1992 issue of AIHW News.

During the year the Committee submitted to the Board its comments on the amendments to the Act, particularly those relating to the requirement for revision of the Regulations pertaining to the Committee, which are not yet enacted, and the matter of ethical oversight of the Institute’s welfare-related functions.

The revised ‘Guidelines for the protection of privacy in the conduct of medical research’ which were approved by the Privacy Commissioner took effect from 1 July 1991. It is still unclear how, or if, they apply to the work of the AIHW Ethics Committee. The Commissioner’s office has promised to reply to the Committee’s queries and a request for clarification.

APPENDIX 6

Seminars

AIHW seminars

18 June 1992  
Roy Harvey, Colin Mathers & John Goss  
*Where AIHW should go in relation to outcomes and what we have to offer*

26 February 1992  
Sarah Brown  
*An insight into the Japanese health care system with Australian comparisons*

Manoa Renwick  
*The implementation of the National Women's Health Program—progress report*

27 November 1991  
Tony Lea  
*Cochlear implants—assessment issues*

Naarilla Hirsch  
*Minimal access surgery*

2 October 1991  
Tony Greville  
*National Health Information Agreement*

Steve Gillett  
*Variations in public hospital costs and staffing levels in 1987–88*

4 September 1991  
Steve Gillett  
*Implications for AIHW of some current health services' research in the USA*

Del Cowley  
*The development of an early warning system for new health care technologies*

14 August 1991  
Nigel Mercer  
*Information Management in AIHW*

24 July 1991  
Dr John Donovan  
*Introduction to the work of the Health Monitoring Division*

Dr Colin Mathers  
*Report on participation at Network on Health Expectancy Conference in the Netherlands*
AIHW and NCEPH joint seminars

AIHW and NCEPH held joint seminars from July to November 1991. The titles and dates of the seminars are given below.

11 July 1991  Steve Kulis, Arizona State University, NCEPH
             Social class and the perceived burden of caring for older parents

25 July 1991  Professor A J Spencer, AIHW (DSRU)
             The effectiveness of water fluoridation: methodological issues for improved information

8 August 1991 Debbie Freund, NCEPH
             The United States outcomes and effectiveness movement: origins and examples from a study of joint replacements

22 August 1991 Roy Harvey, National Health Strategy, AIHW
               Quality and effectiveness of care—Australia and the USA

5 September 1991 Dr John McCallum, NCEPH
                Social support and wellbeing in old age: the Dubbo study

19 September 1991 Dr Colin Mathers, Health Monitoring Division, AIHW
                  Health inequalities in Australia

17 October 1991 Professor Mike Lane, Visiting Fellow, NCEPH
                The first six months of the HIV epidemic: tales from the centers for disease control

31 October 1991 Dr Neil Thomson, AIHW
                 Aboriginal health: lessons from Canada and the United States

14 November 1991 Steve Gillett and John Goss, AIHW
                 Public and private hospital costs—a review and future directions

NPSU perinatal epidemiology seminars

The National Perinatal Statistics Unit held monthly Perinatal Epidemiology seminars at the University of Sydney.

Membership of committees and working parties

Mr Rob Carter  
NHMRC Prevention Strategies Panel  
NHMRC Working Party on Assessment of Preventative Activities in the Health Care System  
Ministerial Panel on Evaluation of the National Better Health Program  
National Women’s Health Program Evaluation Steering Committee

Dr Ching Choi  
Australian Population Association, Treasurer  
Journal of the Australian Population Association, Member of the Editorial Board

Dr Michael Cook  
IT/14 Health Informatics Committee  
Standards Australia  
National Minimum Data Set for Institutional Health Care Review Committee

Michael Davies  
NHMRC Expert Advisory Panel on Discretionary Fluorides

Dr John Donovan  
NHMRC Public Health Research and Development Committee  
NHMRC Research Subcommittee of Public Health Research and Development Committee  
Ethnic Health Data Project Steering Committee

Dr David Hailey  
Australian Health Technology Advisory Committee  
Biliary Lithotripsy Evaluation Committee, St Vincent’s Hospital, Melbourne

Dr James Harrison  
National Road Trauma Advisory Council  
Flinders University Centre for Health Advancement Board  
WHO Working Group on Injury Surveillance Methodology  
NH&MRC Domestic Chemicals Working Party (reported August 1991)  
Coroners’ Database Project Planning Committee  
South Australian Injury Prevention Forum  
Child Accident Prevention Foundation of Australia Operations Planning Committee  
Standards Australia Committee CS/34——Safety of private swimming pools. [Dr R Pitt, Director of Paediatrics, Motor Hospital, Brisbane, represents Dr James Harrison on this committee].
Appendix 7

Roy Harvey
Professional Indemnity Review Reference Committee
National Minimum Data Set for Institutional Health Care Review Committee

Sharon Kidd
National Perinatal Data Advisory Committee (Secretary)

Dr Paul Lancaster
International Clearinghouse for Birth Defects Monitoring Systems—Vice Chairperson
International Working Group for Registers on Assisted Reproduction (Chairman)
Working party on Categorisation of Drugs in Pregnancy, Australian Drug Evaluation Committee
National Perinatal Data Advisory Committee (Chairman)
Standing Committee on Perinatal Medicine, Australian College of Paediatrics
Ethics Committee, Family Planning Association of New South Wales
Birth Defects Register Advisory Committee, NSW Department of Health
NHMRC Expert Panel on Perinatal Morbidity

Jennifer Mitchell
Medical Record Association of Australia Council
International Federation of Health Records Organizations Executive
Health Informatics Committee, Standards Australia
ICD Diagnostic Coding Standards Committee, Queensland Health
Expert Reference Committee, National Patient Abstracting and Coding Project, Department of Health, Housing and Community Services

Elizabeth Moss
National Minimum Data Set for Institutional Health Care Review Committee

Jennifer Nicol
Queensland Medical Record Association Board
ICD Diagnostic Coding Standards Committee, Queensland Health

Peter O'Connor
National Road Safety Research Strategy Working Group.

Manoa Renwick
AHMAC Subcommittee on Women's Health, Member
Working Party on National Women's Health Goals and Targets, Convenor
National Minimum Data Set for Institutional Health Care Review Committee

Gary Slade
NHMRC Working Group on Effectiveness of Water Fluoridation
NHMRC Expert Advisory Panel on Oral Health Care for Older Adults
Membership of committees and working parties

Dr Leonard Smith
Advisory Committee, Centre for Clinical Epidemiology and Biostatistics, University of Newcastle
Advisory Committee and Board of Studies, National Centre for Epidemiology and Population Health, Australian National University
Australian Health Ministers’ Advisory Council (by invitation)
National Health and Medical Research Council (by invitation)
Ethnic Health Data Project Steering Committee (Chair)
Working Group for Monitoring Cardiovascular Disease in Australia
WHO/INSERM International Research Network for the Interpretation of Observed Values of Health Expectancy
WHO Heads of Collaborating Centres for the Classification of Diseases
Federation for International Cooperation of Health Services and Systems Research Centres (Vice President)

Professor John Spencer
Community Dentistry Oral Epidemiology, Advisory Board
Dental Health Services Committee, Australian Dental Association
NHMRC Working Group on Effectiveness of Water Fluoridation
NHMRC Expert Advisory Panel on Impact of Change in Oral Health Status on Dental Education, Workforce, Practices and Services in Australia
NHMRC Expert Advisory Panel on Oral Health Care for Older Adults

Natalie Staples
AHMAC Labourforce Research Auspice Group

Dr Neil Thomson
Australian Institute of Aboriginal and Torres Strait Islander Studies, Member, Aboriginal Health Workshop Organising Committee, 1991–1992
National Health and Medical Research Council: Member, Working Party on Anaesthetic Mortality; Consultant, Maternal Mortality Panel
National Health and Medical Research Council: Consultant, Maternal Mortality Panel
Public Health Association of Australia: Member, Standing Committee of Public Affairs
Royal Flying Doctor Service of Australia: Australian Councillor

Appendix 8

Title: Injury Prevention
Funding body: HHCS
Project: Develop a national strategic plan for injury control; manage planning for the Third International Conference on Injury Control; provide secretariat support for the Trauma Treatment and Intervention Committee of the National Road Trauma Advisory Council; and provide an information, advisory, and support service for injury control practitioners
Contact: Dr James Harrison

Title: Roads Injury
Funding body: HHCS
Amount: $695,000 (1991–92 to 1993–94)
Project: To improve the collection of injury data to assist in analysing the nature and extent of injury incurred in road accidents
Contact: Dr James Harrison

Title: Casemix Technical Advisory Committee
Funding body: HHCS
Amount: $50,000 (1989–90 to 1991–92)
Project: Provide secretarial, consultancy and other support services for the Technical Advisory Committee of the Commonwealth Casemix Development Program. Production of Australian Casemix Bulletin
Contact: Mr Roy Harvey

Title: Non-Acute Inpatient and Non-inpatient Classification Systems
Funding body: HHCS
Amount: $100,000 (1989–90 to 1991–92)
Project: Develop classification systems for non-acute inpatients and non-inpatients of acute hospitals
Contact: Mr Roy Harvey

Title: Medical Workforce Data Review Committee
Funding body: AHMAC
Project: Provide professional and technical support for the AHMAC Medical Workforce Data Review Committee, functions of which include commissioning, interpreting and analysing Australian medical workforce data
Contact: Mr Tony Greville

Title : Ageing and Health Care
Funding body : The Economic Planning Advisory Council
Amount : $5,000 (1991-92)
Project : The compilation and analyses of material on the health impact and financial aspects of the ageing of the Australian population in the 21st century
Contact : Mr John Goss

Title : Support for AHTAC Related Activities
Funding body : AHMAC
Amount : $90,000 (1991-92)
Project : Development of guidelines and evaluation of nationally funded centre proposals
Contact : Dr David Hailey

Title : Health Technology Evaluation
Funding body : HHCS
Amount : $250,000 (1989-90 to 1992-93)
Project : Support for external projects associated with AHTAC
Contact : Dr D Hailey

Title : Early Warning System for New Health Technologies
Funding body : HHCS
Amount : $20,000 (1990-91 to 1991-92)
Project : Develop a methodology for providing early advice on new and developing health technologies
Contact : Dr Dell Cowley

Title : Periodic Health Checks
Funding body : HHCS
Project : Development and application of a disease impact evaluation model
Contact : Mr Rob Carter

Title : Macro Evaluation Model
Funding body : HHCS
Project : Assess and prioritise a wide range of health promotion and illness prevention programs
Contact : Mr Rob Carter
Activities funded by outside bodies

Title: WELSTAT  
Funding body: State Governments  
Amount: $25,571 (1991–92) ongoing  
Project: The collection of welfare statistics from all Australian States  
Contact: Dr Ching Choi

National Perinatal Statistics Unit

Title: Amniocentesis in twin pregnancies  
Funding body: NSW Health Department  
Amount: $45,000  
Project: Study of pregnancy outcome in twin pregnancies in New South Wales  
Contact: Dr Paul Lancaster

Title: Register of pregnancies after assisted conception  
Funding body: Fertility Society of Australia and Organon  
Amount: $20,000  
Project: Maintain register of pregnancies in Australia and New Zealand, and publish reports and other studies  
Contact: Dr Paul Lancaster

Title: Homebirths in Australia (1988–90)  
Funding body: National Health and Medical Research Council  
Amount: $26,033.80  
Project: Collect data and publish a report on home births in Australia  
Contact: Dr Paul Lancaster

Title: Perinatal Newsletter  
Funding body: Australian Perinatal Society  
Amount: $1,500  
Project: Publication of quarterly Perinatal Newsletter  
Contact: Dr Paul Lancaster
Appendix 8

Dental Statistics and Research Unit

Title : The Efficacy of Fluorides in Preventing Dental Caries in a Child Population
Funding body : NHMRC
Amount : $152,265 (over three years)
Project : Examine the role of fluorides, including water fluoridation, in the prevention of dental caries
Contact : Professor A John Spencer

Title : The Effect of Reduced Water Fluoridation on Dental Caries in Children
Funding body : NHMRC
Amount : $81,808
Project : Monitor the effect of exposure to water fluoridation at reduced concentrations (approximately 0.5 ppm) on dental caries in Australian children
Contact : Mr Michael Davies

Title : Oral and Maxillofacial Surgeons 1990 Workforce Study
Funding body : Australian and New Zealand Association of Oral and Maxillofacial Surgeons
Amount : $7,700
Project : Examine the Oral and Maxillofacial Surgeon Labourforce, practice patterns and services provided, and recruitment needs
Contact : Professor A John Spencer
APPENDIX 9

AIHW data listing

Contents

1. AIDS and related deaths

2. Australian Aborigines and Torres Strait Islanders
   - Births
   - Deaths
   - Fetal and infant deaths
   - Hospitalisation

3. National Cancer Statistics Clearing House

4. National Death Index

5. Mortality data

6. National Health Labourforce Collection

7. Hospital Morbidity data

8. Hospital Utilisation and Costs Study (HUCS) data
1. AIDS and related deaths

Description
The listings show registration numbers and statistical details of deaths for AIDS, causes related to AIDS, and, since 1988, deaths from any cause where AIDS or HIV was mentioned anywhere on the death certificate.

Current AIHW data holdings

(1) Includes name code of first two letters of surname and first two letters of first forename as used by National Centre for HIV Epidemiology and Clinical Research.

(2) Includes names.

(3) For 1987 and earlier years listings do not include deaths from underlying causes not related to AIDS even though AIDS or HIV might have been mentioned on death certificate.
2. Australian Aborigines and Torres Strait Islanders—births

Note: In this report, the term 'Aborigine' is used to refer to both Australian Aborigines and Torres Strait Islanders.

Description
The data held by the Institute on births to Aboriginal mothers varies according to the year to which it relates. Until relatively recent years, the data was provided by the State and Territory health authorities largely for the purpose of estimating infant mortality rates. As such, data for these years are simply the numbers of births (live births and fetal deaths or stillbirths) occurring to Aboriginal mothers. For more recent years, some of the data include other details of the mother and baby (for example, age of mother and baby's weight). From around the mid-1980s, the State and Territory births registration systems started to provide for the identification of Aborigines, but the Institute's databases are still derived from information provided by the health authorities.

(1) Data for Queensland relate to Aborigines living in the Queensland Aboriginal communities (about one-fifth of the State's Aboriginal population).
2. Australian Aborigines and Torres Strait Islanders—deaths

Note: In this report, the term ‘Aborigine’ is used to refer to both Australian Aborigines and Torres Strait Islanders.

Description
Provision for the identification of Aboriginal deaths now exists in the deaths registration systems of all States and Territories except Queensland. This enables the extraction from the basic mortality database (see page 120) of information on Aboriginal deaths. However, provision for the identification of Aborigines in these data has only recently been implemented in most jurisdictions—the following table shows the years for which data on Aboriginal deaths are available. For some jurisdictions (indicated with a footnote), the identification of Aborigines is believed to be so incomplete as to preclude meaningful analysis. Information on deaths of Aborigines living in the Queensland Aboriginal communities (about one-fifth of the State’s Aboriginal population) is available for the period 1972–1990.

(1) For these years the identification of Aborigines is believed to be so incomplete as to preclude meaningful analysis.

(2) Deaths identified by Queensland Health, but not by the formal deaths registration system. These data relate to Aborigines living in the Queensland Aboriginal communities (about one-fifth of the State’s Aboriginal population).
2. Australian Aborigines and Torres Strait Islanders—fetal and infant deaths

Note: In this report, the term ‘Aborigine’ is used to refer to both Australian Aborigines and Torres Strait Islanders.

Description
These data have been provided by State and Territory health authorities, and do not necessarily correspond to the Aboriginal deaths identified by the formal registration systems maintained by the State and Territory Registrars of Births, Deaths and Marriages. The data form the basis of estimates produced by the Institute of Aboriginal perinatal and infant mortality rates.

(1) Data for Queensland relate to Aborigines living in the Queensland Aboriginal communities (about one-fifth of the State’s Aboriginal population).
Appendix 9

2. Australian Aborigines and Torres Strait Islanders—hospitalisation

Note: In this report, the term ‘Aborigine’ is used to refer to both Australian Aborigines and Torres Strait Islanders.

Description
The hospital morbidity systems maintained by each State and Territory now provide for the identification of Aborigines. However, for some jurisdictions, the identification of Aborigines is believed to be so incomplete as to preclude meaningful analysis. The Hospital Morbidity data section (page 123) provides details of the years for which the Institute holds hospital morbidity data, but generally special approval is required from the relevant State or Territory health authority to permit analysis of these data for episodes of Aboriginal hospitalisation.

Current AIHW data holdings
See ‘Hospital Morbidity’ database (page 123).
3. National Cancer Statistics Clearing House

Description
This database is a collation of State and Territory cancer registration incidence and mortality information. It contains those demographic and oncological data items defined in its protocol. The database provides an opportunity for national cancer statistics to be produced, a central contact point for national information retrieval, and matching with cohort datasets. It will allow for the analysis of data over time and across several differential variables.

(1) National melanoma data for 1989 have been collated and analysed.
(2) ACT data provided with NSW data.

Database progress and current status
Datasets provided by the State and Territory registries have been standardised and uploaded into a relational database. The database has been searched for duplicate registrations using a Record Linkage System (RLS). The cancer registries are presently resolving the identity and ownership of suspected duplicate cases generated by the cross-matching. Duplicate cases will subsequently be merged with the national and State/Territory databases.

Good progress has been made in standardising the rules and methods of data handling and transfer between States, Territories and the national level. This will help to ensure data consistency in the future. Analysis of the current database has enabled the NCSCH to document and adjust for individual State and Territory coding rules, resulting in the forthcoming publication of Cancer in Australia 1983–1985.

Timeliness of data from State and Territory registries is the major problem for the NCSCH at present. This issue has been noted and efforts have been made to resolve the difficulties. It is hoped that at the August 1992 meeting of the Australasian Association of Cancer Registries agreement will be reached to enable all State and Territory cancer registries to supply data up to 1988. Those registries further advanced will continue to supply data at the completion of their
registration each year. It is expected that once fully operational the NCSCH data base will be at least 1–2 years behind the last year of registration at the State level.

The supply of abbreviated personal identifiers has also hampered the progress of the database. Use of abbreviated identifiers has led to excessive manual data handling which would be minimised by State and Territory registries supplying full names, a practice followed by only four States. Some data items are presently unavailable from States and Territories. While this should be rectified in the near future in some instances, for other items changes would entail legislative amendments.

At present the database is close to full operation and some analyses have been possible. Many external requests for data from both public and private sectors have been fulfilled. The publication of *Cancer in Australia 1983–1985* is anticipated in early November 1992, with further volumes following soon after. The database has already been used to generate a special analysis of melanoma incidence in 1989, with a paper to be published soon.
4. National Death Index

Description
The aim of the National Death Index is to establish a single national index to all Australian deaths in one location. Its purpose is to facilitate the work of epidemiologists in their studies of diseases.

</table>

(1) NSW has provided a test tape of 1980 data. This data will be extended up to 1991 when computer problems have been resolved (probably by mid-October 1992).

(2) Victoria possesses good computerised data from May 1989. Assistance will be required from AIHW in order to obtain data from 1980 to April 1989.

(3) The Queensland Registrar-General has not agreed to participate in lieu of the proposed establishment of a State Privacy Committee. An approach has been made to the head of the Queensland Department of Justice to resolve this.

(4) Western Australia has provided data on tape for 1984 to 1990. Computerised data from 1980 to 1983 will be provided only with financial assistance from AIHW.

(5) South Australia has provided complete data from 1980 to 1990 and has commenced supplying monthly disks from its new system from April 1992.

(6) Tasmania has supplied data from its own computerised holdings from 1972 to 1992.
Appendix 9

(7) ACT has agreed to participate, but has not been able to provide reliable computerised data as yet. Some financial assistance from AIHW will be required to backfill to 1980.

(8) NT is computerising its deaths data. Data from 1980 will be supplied when this task is completed.

Database progress and current status

A prototype relational database has been established using data from South Australia, Western Australia and Tasmania. The programs used for this purpose were developed for a different project and have been found to have a number of deficiencies. Development will commence shortly on more suitable programs.
5. Mortality database

Description

The purpose of the Mortality database is to collect available statistics on all Australian deaths in order to support analyses of deaths by various socioeconomic variables.

(1) The data from 1980 onward is based on the ABS death unit records, but also include the death registration number to facilitate access to source documents.

(2) The data from 1964 to 1979 are in ABS death unit record format.

Database progress and current status:

The database has been established using data supplied by ABS with the approval of all registries.
6. National Health Labourforce Collection

Description
In June 1990, the Australian Health Ministers' Conference and the Australian Health Ministers' Advisory Council requested that the then Australian Institute of Health obtain agreement for the establishment of a National Minimum Data Set (NMDS) for registrable health occupations by the end of 1991, with data flow commencing by the end of 1993. Funding was provided to expedite this request. States and Territories agreed to cooperate with AIHW to ensure that the specified time frames are met. This work is known as the National Health Labourforce Collection (NHLC).

The NHLC will consist of an annual labourforce survey, to be administered at annual licence or registration renewal when there are already established administrative procedures for contacting members of the profession. Current administrative data held by registration boards will also be used to access unchanging demographic data that will be merged with the annually collected information. AIHW is also establishing relationships with professional associations for those occupations where registration is not universal across all States and Territories.

Discussions are well under way with the following health professions: medicine, nursing, pharmacy, dietetics, podiatry and dentistry. The dentistry collection is being coordinated by the AIHW Dental Statistics Research Unit in Adelaide.

Initial discussions have commenced with the radiography, occupational therapy and physiotherapy professions. These professions have been given priority following direct approach for involvement from their respective professional organisations.

It is expected that negotiations will commence later this year for the occupations of psychology, speech therapy, chiropractic and optometry.

Current discussions include negotiations on an agreement to cover responsibility for all components of the collection. The major issue raised in these discussions has been the funding of additional resources required where no data have been collected in the past or where resource-intensive alterations to current collections are required.

Further progress in implementing the Collection and the commencement of actual data flows is strictly contingent on the resolution of resourcing issues within individual States and Territories. Because the status of this project varies across all States and professions, the following tables (which cover the major occupations where State-based negotiations have commenced, i.e., medicine, nursing, pharmacy, podiatry, dentistry) provide a summary of negotiations to date rather than a description of current and anticipated data holdings.

The radiography and dietetics professions are being coordinated and will be administered by the Australian Institute of Radiographers and the Dietitians Association of Australia respectively. The radiography survey will be piloted in Tasmania in 1992. It is noted that major progress towards implementation of the NHLC across all professions has been made in Tasmania and NSW (largely due to the initiative of the respective Departments of Health and the support of the State's registration boards).

(2) NHLC used.
(3) Some entry point variables included in this collection.
(4) Negotiations in progress.
(5) Board may not be involved in NHLC. State health authorities considering administering survey separate to re-registration.

n/a Not applicable. Profession not registrable.
7. Hospital Morbidity data

Description
Information is collected relating to the demographic details, clinical conditions, insurance status and duration of stay in hospital for patients admitted to acute hospitals. It forms the basis of the hospital morbidity collections. These data are compiled on an annual basis (some times calendar but usually financial) for all inpatients who are discharged, transferred or die in hospital during the year.

Provision of data
AIHW has entered into a number of bilateral agreements with various States and Territories for the release of morbidity data to AIHW. These agreements are essentially on an annual basis and can be terminated at any time by either AIHW or the State/Territory. The data are constrained so that the actual conditions of release and the information provided vary, both over time and between health authorities. In general four principles apply:

- No unit record data is to be released without clearance from the data provider.
- No hospital-specific data is to be released without clearance from the data provider.
- Research projects which will identify specific States or Territories should be discussed with the suppliers and the suppliers given a chance to comment on the results prior to publication.
- Data are for research purposes and not for provision of information to outside authorities. In these cases estimated national data should be provided.

The release of unit record data to AIHW has been negotiated separately to the provision of summary data for the Hospital Utilisation and Costs Study data.

AIHW data listing

(1) AIHW also holds data for calendar years 1979 to 1986 excluding 1982 when few data were collected.
(2) AIHW also holds data back to 1984–85. No private hospitals are included by Victoria in its collections.
(3) Data from calendar year; all other States and Territories are financial year.
(4) AIHW holds data back to 1985–86.
(5) Some data for early 1980s held but not a complete coverage of hospitals.
(6) Data expected.
(7) First year of coding under ICD-9-CM. Data of limited quality, especially for private hospital data.
(8) Partial data only held.

Database progress and current status
Work is currently under way to load the Institute’s hospital morbidity data collection into a relational database structure.
Appendix 9

8. Hospital Utilisation and Costs Study (HUCS) data

Description
A two-yearly survey of public hospitals. Hospital-specific information is collected on:

- available beds
- separations, bed-days and non-inpatient services
- staffing FTE broken into broad categories
- salary costs broken into staffing categories
- non-salary costs broken into broad categories
- revenue.

In addition summary morbidity data is provided in a tabular form giving:

- age
- diagnosis
- procedure
- external cause.

Each table is further categorised by sex, hospital type and patient charging. In some cases data provided were for the latest available year, at the time of collection.

(1) New South Wales provided limited financial and staffing data. Further, for metropolitan hospitals the financial data were aggregated for regions and collected according to programs (e.g. psychiatric services) rather than hospitals.

(2) No summary morbidity data.

Database progress and current status
The HUCS survey program is to be superseded by the National Minimum Data Set survey program starting in 1991-92. This will be an annual survey of both public and private institutions. AIHW will collect data on public institutions and ABS will collect data on private institutions. AIHW is currently developing the data collection and processing system and meeting with all States and Territory health authorities. ABS has piloted its collection instrument.
APPENDIX 10

Freedom of Information requests
There were no requests under the *Freedom of Information Act 1982* during 1991–92.
APPENDIX 11

Cumulative publications list

Australia’s health

Australia’s health is AIHW’s biennial report on the health of Australians and the state of Australia’s health services.

<table>
<thead>
<tr>
<th>Title</th>
<th>Date published/frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Australia’s health 1988</td>
<td>1988</td>
</tr>
<tr>
<td>The first biennial report of the AIHW assembles statistical data on the state of the nation’s health and health services. It covers such topics as the changes in occurrence of diseases and expectation of life; the effects of age, sex, social status and occupation on the incidence of sickness and disease; the present scope and cost of health services; health technologies; and the likely changes in health and health services as the Australian population ages.</td>
<td>Dec 1990</td>
</tr>
<tr>
<td>Australia’s health 1990</td>
<td>Jun 1992</td>
</tr>
<tr>
<td>The second biennial report of the AIHW. Contains data from statisticians, health authorities, universities and community organisations on life, death and disability, health strategies, inequality, and hospital and medical services. The report also looks at the quality of survival in older age. Trends in health and health services are shown graphically in more than 100 charts, and a comprehensive index and glossary are included.</td>
<td></td>
</tr>
<tr>
<td>Australia’s health 1992</td>
<td></td>
</tr>
<tr>
<td>The third biennial report of the Australian Institute of Health and Welfare contains information on almost any aspect of Australia’s health and health services. Topics include: • the health of Australians—mortality, sickness, disease, disability and handicap; • Australia’s health care resources and funding—insurance, personnel and facilities; • health services and expenditure; • health utilisation; • health technologies; • pharmaceutical drugs; • recent developments in health statistics; and • health promotion and disease prevention. The text is backed by 80 charts, 200 tables and 24 special information boxes. A comprehensive index, glossary and extensive reference lists are also included.</td>

NHTAP

The National Health Technology Advisory Panel (NHTAP), supported by AIHW since early 1987, was established to advise the Commonwealth Government on new and established health technologies. The Panel was superseded in 1990 by the Australian Health Technology Advisory Committee (AHTAC).

## AHMAC Superspecialty Services Subcommittee

The reports by the Superspecialty Services Subcommittee of the Australian Health Ministers' Advisory Council (AHMAC) relate to the development of guidelines for State or national planning of specialised health services for rare diseases or those involving costly treatments. The first seven reports in the following list were published by AHMAC. In 1990 the Subcommittee was superseded by the Australian Health Technology Advisory Committee (AHTAC).

AHTAC

The Australian Health Technology Advisory Committee (AHTAC), established in 1990, subsumed the functions and responsibilities of the former National Health Technology Advisory Panel (NHTAP) and the AHMAC Superspecialty Services Subcommittee. AHTAC advises the Commonwealth Government on new and established health technologies.
