

Psychiatric disability support services

This section presents information on specialist disability support services, provided under the [National Disability Agreement \(NDA\)](#) to service users with a [Psychiatric disability](#) either as their [Primary disability](#) or as an [Other significant disability](#). Unless otherwise stated, service users with a psychiatric disability include all service users with a psychiatric disability, regardless of whether it is considered a primary or other significant disability.

The information presented in this section has been extracted from the 2016-17 Disability Services National Minimum Data Set (Disability Services NMDS); comprising national administrative data on disability support services. The [data source](#) section provides further information on coverage, data quality, and other aspects of the Disability Services NMDS.

The [National Disability Insurance Scheme \(NDIS\)](#) began operating at trial sites in July 2013. From July 2016, it began transitioning to the full scheme and the roll-out is ongoing. Most existing NDA service users are expected to move to the NDIS over time, but not all will (AIHW 2018). This section also includes data on the number of NDA service users who transitioned to the NDIS in the period 2013–14 to 2016–17. The [data source](#) section provides further information on the NDIS. The AIHW is pursuing data about support services provided to people with [psychosocial disability](#) through the NDIS.

Key points

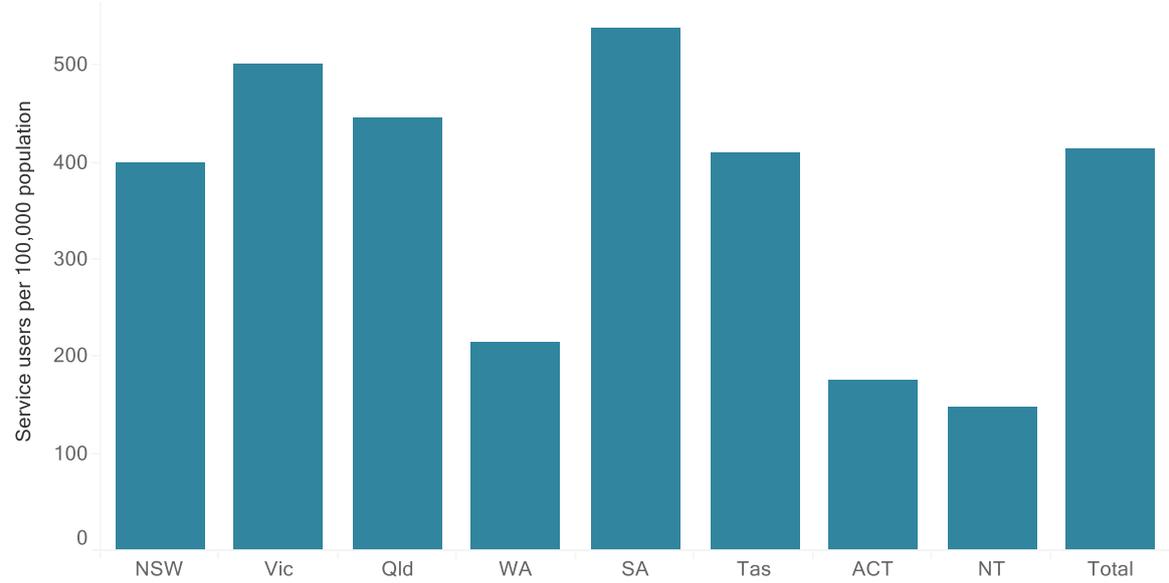

- About 100,900 people with a psychiatric disability received disability support services in 2016–17.
- About 4,100 services users with a psychiatric disability transitioned to the NDIS during the period 2013–14 to 2016–17.
- Non-residential support services were accessed by users with a psychiatric disability at a much higher rate than residential services.
- Employment services was the most common non-residential service accessed by users with a psychiatric disability in 2016–17.
- Group homes was the most common residential service type accessed by service users with a psychiatric disability in 2016–17.
- The rate of service users with a psychiatric disability was more than 1.5 times as high for Aboriginal and Torres Strait Islander people than other Australians.

Service users with a psychiatric disability

Across Australia, 330,984 people made use of specialist disability support services provided under the NDA during 2016–17 (AIHW 2018). Of these, 100,939 people had a psychiatric disability, with 64,578 of these having a primary psychiatric disability.

In 2016–17, there were 413.9 users of psychiatric disability support services per 100,000 population nationally (Figure DIS.1). South Australia had the highest rate (537.5) of service users followed by Victoria (500.8) and Queensland (444.6). With the transition of clients into the National Disability Insurance Scheme (NDIS), the Australian Capital Territory did not collect data under the National Disability Agreement during 2016–17. Consequently, ACT data only includes users of Australian Government administered services.

Figure DIS.1: Service users with a psychiatric disability, states and territories, 2016-17

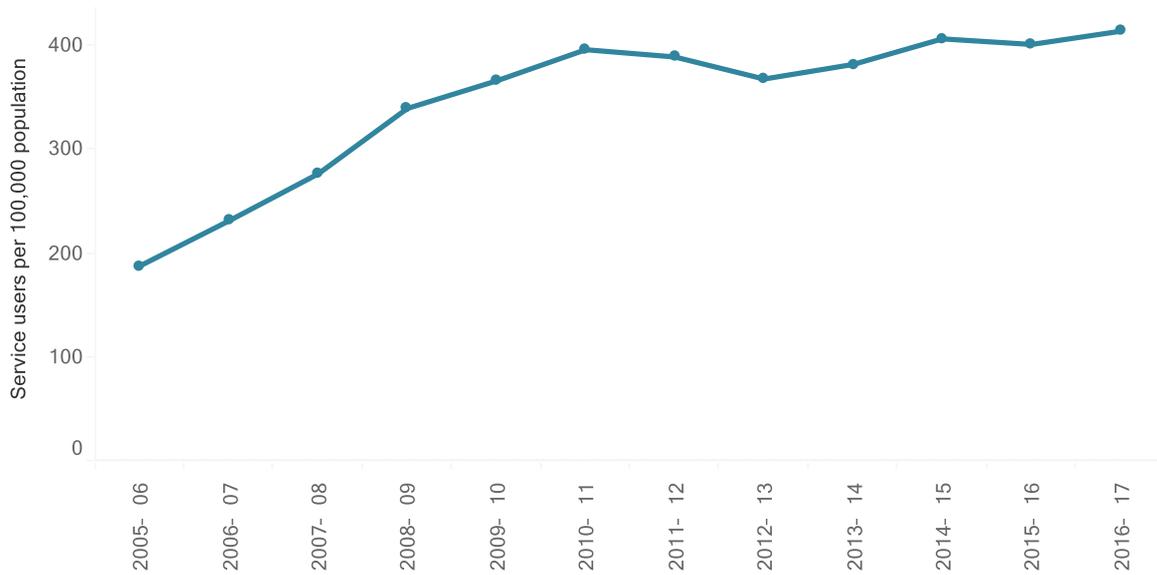

ACT data is limited to Australian Government administered services. See Technical notes for further information.

Source: Disability Services National Minimum Data Set, Table DIS.1.

Over the 5 years to 2016–17, the rate of service users per 100,000 population with a psychiatric disability increased an average of 3.0% annually, from 367.8 in 2012–13 to 413.9 in 2016–17 (Figure DIS.2). These changes should be interpreted with caution, due to changes in the methodology used over time. Also, data from 2013–14 onwards are affected by the progressive introduction of the NDIS—as a result, analysing trends in Disability Services NMDS data over time is complex, but a decrease in the number of clients accessing the NDA is expected as the roll-out of the NDIS progresses. More information can be found in the [data source](#) section.

ACT data for 2016-17 is limited to Australian Government administered services. See Technical notes for further information.

Source: Disability Services National Minimum Data Set, Table DIS.3.

Nationally, there were 264.8 service users per 100,000 population with a primary psychiatric disability (Figure DIS.3). Victoria had the highest rate (360.8) followed by South Australia (288.2) and Queensland (282.3).

Figure DIS.3: Service users with a primary psychiatric disability, states and territories, 2016-17

ACT data is limited to Australian Government administered services. See Technical notes for further information.

Source: Disability Services National Minimum Data Set, Table DIS.2.

NDA service users who transitioned to the NDIS

As at 30 June 2017, there were 6,093 people with a primary [psychosocial disability](#) who were active participants with an approved plan (a document outlining a participant's needs and goals) under the NDIS (NDIA 2017). The NDIS began transitioning to the full scheme from July 2016. The NDIS roll-out is ongoing.

During 2016-17, about 29,000 NDA service users transitioned to the NDIS (AIHW 2018). Of these, there were 2,963 service users with a psychiatric disability. This number is likely to be an underestimate, as it excludes data from the Australian Capital Territory Government who did not report data to the Disability Services NMDS for 2015-16 or 2016-17. There was a large increase in the number of service users with psychiatric disability who transitioned to the NDIS in 2016-17 compared to previous years. This reflects the commencement of the full scheme roll-out from 1 July 2016.

Most service users with a psychiatric disability who transitioned to the NDIS in 2016-17 were aged 35-54 years (1,381 or 47%). Of service users with a psychiatric disability who transitioned to the NDIS in 2016-17, there were 1,617 (55%) who lived in a private residence, 2,440 (82%) reported the Disability Support Pension as their main source of income, and 1,335 (45%) were not in the labour force.

Services accessed by users with a psychiatric disability

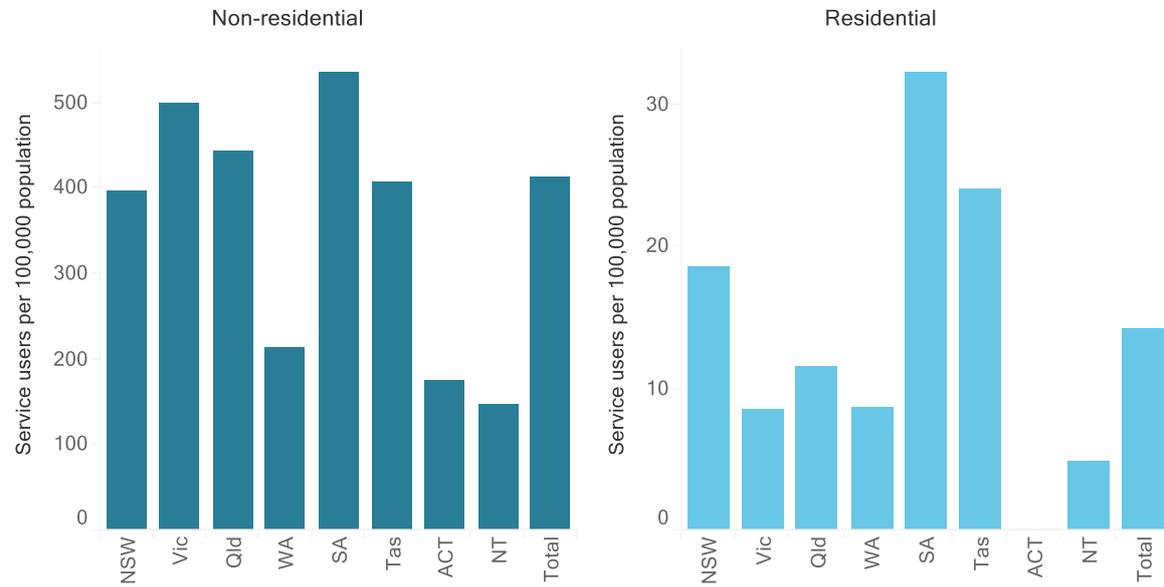

The disability support services accessed by people with a psychiatric disability may be either [Residential support services](#) or [Non-residential support services](#) or both, depending on availability and their individual needs. Non-residential services are provided either by [State or territory administered services](#) or [Australian Government funded services](#). Residential services are provided by state or territory administered services.

Non-residential support services include [Accommodation support](#), [Community support](#), [Community access](#), [Respite services](#), and [Employment services](#).

Residential [Service types](#) include [Large residential facilities/institutions](#), [Small residential facilities/institutions](#), [Hostels](#) and [Group homes](#).

Non-residential services are provided at a much higher rate than residential services. In 2016–17, there were 411.9 users per 100,000 population with a psychiatric disability who accessed non-residential services whilst 14.2 users per 100,000 accessed residential services (Figure DIS.4). South Australia had the highest rates of both non-residential and residential service usage (535.1 and 32.3 per 100,000, respectively).

Figure DIS.4: Service users with a psychiatric disability, non-residential and residential services, states and territories, 2016-17

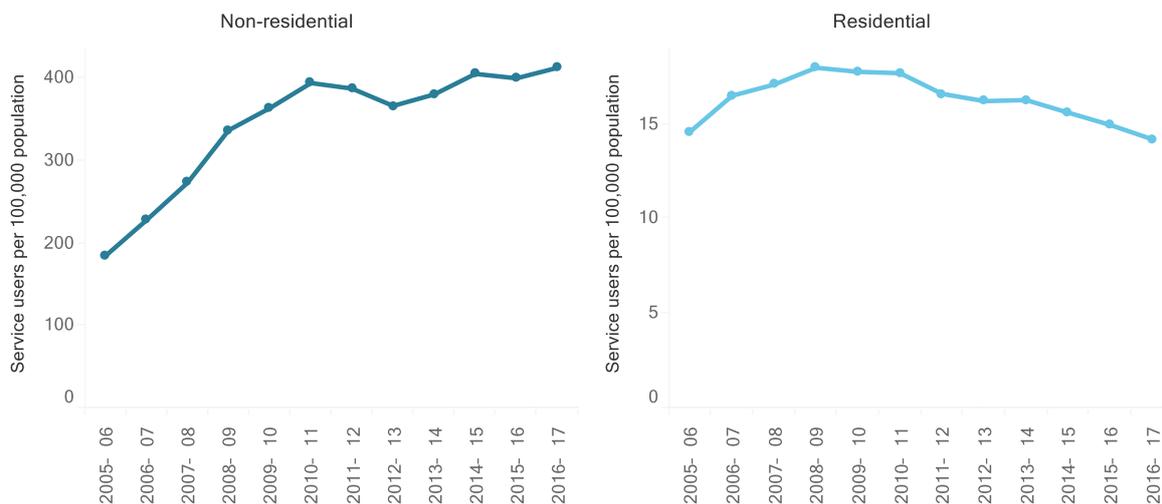

ACT data is limited to Australian Government administered services. See Technical notes for further information.

Source: Disability Services National Minimum Data Set, Table DIS.1.

Non-residential disability support services

Over the 5 years to 2016–17, the rate of non-residential service users with a psychiatric disability increased on average by 3.0% annually, from 365.6 users per 100,000 population in 2012–13 to 411.9 in 2016–17 (Figure DIS.5).

Figure DIS.5: Service users with a psychiatric disability, non-residential and residential services, 2005-06 to 2016-17

ACT data is limited to Australian Government administered services. See Technical notes for further information.

Source: Disability Services National Minimum Data Set, Table DIS.3.

Service users with a psychiatric disability accessed [Employment services](#) at a higher rate than other non-residential services, nationally in 2016–17. South Australia had the highest rate at 444.7 users per 100,000 population who accessed Employment services. Other non-residential services accessed were [Community support](#) (68.0 users per 100,000 nationally), [Community access](#) (24.8 nationally), [Accommodation support](#) (18.5 nationally) and [Respite services](#) (16.4 nationally). Victoria had the highest rate of Respite service usage (42.3 users per 100,000 population).

Residential disability support services

Over the 5 years to 2016–17, the rate of residential service users with a psychiatric disability has decreased by an average of 3.3% annually, from 16.2 users per 100,000 population in 2012–13 to 14.2 in 2016–17 (Figure DIS.5).

Nationally, Group homes were the most common residential service type for users with a psychiatric disability (12.0 service users per 100,000 population). Group homes were the only residential service type reported for people with a psychiatric disability in the Northern Territory.

Client characteristics

For clients with a psychiatric disability using non-residential services (100,438), almost 2 in 3 (64,390 or 64.1%) had a primary psychiatric disability. The most frequently reported primary disability for residential service users with a psychiatric disability (3,455) was intellectual disability (2,171 or 62.8%).

Non-residential service users

There were more male (52.9%) than female (47.1%) users with a psychiatric disability accessing non-residential disability support services in 2016–17. About two-thirds (63.7%) were aged 25–54 and 4 in 5 (81.0%) were born in Australia.

About 5.7% of non-residential service users with a psychiatric disability were Aboriginal and Torres Strait Islander people. The rate was more than 1.9 times as high for Indigenous Australians than other Australians (765.0 users per 100,000 and 398.6, respectively).

About 81% of non-residential service users lived in a private residence, reported living alone (44.4%), living with others (34.2%), or living with family (21.5%). The most common source of income was a disability or other pension or benefit (87.8%); 8.3% of users reported paid employment as their main income source.

Residential service users

There were more male (58.4%) residential service users with a psychiatric disability than female (41.6%) in 2016–17. The majority of service users were aged 35–64 (70.3%) and born in Australia (93.4%).

About 4.6% of residential service users with a psychiatric disability in 2016–17 were Aboriginal and Torres Strait Islander people. The rate was more than 1.5 times as high for Indigenous Australians than other Australians (21.3 and 14.0 users per 100,000 respectively).

Residential service users with a psychiatric disability were most commonly living with others (89.5%), in a domestic-scale supported living facility (51.4%), and receiving the disability support pension (95.5%) as their main source of income.

Data sources

Disability Services National Minimum Data Set

Data pertaining to services provided under the National Disability Agreement (NDA) are collected through the Disability Services National Minimum Data Set (Disability Services NMDS). This NMDS, managed by the AIHW, facilitates the annual collation of nationally comparable data about disability support services. Services within the scope of the collection are those for which funding has been provided during the specified period by a government organisation operating under the NDA. An agency may receive funding from multiple sources. Where an agency is unable to differentiate service users according to funding source, they are asked to provide details of all service users for each service type. The progressive transition of service users from the NDA to the National Disability Insurance Scheme (NDIS) has reduced the collection of data under the NDA. For this reason, comparisons between years should be undertaken with caution.

With the exceptions noted below, agencies are asked to provide information about:

- each of the service types they provide (that is, service type outlets they operate)
- all service users who received support over a specified reporting period
- the Disability Services NMDS service type(s) the service users received.

However, certain service type outlets—such as those providing Advocacy or information and referral services—are not requested to provide any service user details, and other service type outlets (such as recreation and holiday programs) are only asked to provide minimal service user details.

The collection includes those disability support service providers that provide services under the NDA—including some psychiatric-specific disability service providers and other disability service providers—that may be accessed by people with a psychiatric disability. It should be noted that the NDA does not apply to the provision of services with a specialist clinical focus.

Data for the 2016–17 collection period were released in *Disability support services: services provided under the National Disability Agreement 2016–17* (AIHW 2018). The scope of services varied in terms of programs provided across jurisdictions. For example, in Victoria and Queensland, specialist psychiatric disability services were provided under the NDA. However, in all other jurisdictions specific mental health services were funded and provided under the health, rather than the disability (or other), portfolio. In addition, Victoria has changed the way service users with a psychiatric disability were reported between *Mental health services in Australia* publications. Therefore, comparisons between publications should be approached with caution. See the

[Disability Services National Minimum Data Set 2016–17; Quality Statement](#) and the [Disability Services NMDS collection guides](#).

Response rates

For the 2016–17 collection, there was an overall response rate of 98.1% for service outlets, although rates were variable across jurisdictions. The response rates estimate the number of service outlets providing service user data. Information on which service type outlets provided information for each collection period is not available as part of the Disability Services NMDS. Therefore, there is the possibility that, between collection periods, different outlets, with different proportions of psychiatric disability users, are providing information to the Disability Services NMDS. In addition, the number of non-responses for the item 'Primary disability group' also varies considerably between jurisdictions. The service type outlet response rates and the non-response rates for states and territories for 2005–06 to 2016–17 are shown in Table DIS.12. The user response rate within these outlets cannot be estimated.

The statistical linkage key

Individuals may receive disability support services from more than one service provider, or from multiple jurisdictions. A statistical linkage key enables unique service user counts to be estimated from the data collected by service type outlets and agencies. To link records within the Disability Services NMDS, the statistical linkage key components of each record for a service received are compared electronically with the statistical linkage key components of all other records. Records that have matching statistical linkage keys are assumed to belong to the same individual service user and are linked. There is a small probability that some of the linked records do not actually belong to the same individual, and, conversely, that some records that did not link do belong to the same individual. More technical information on the use, calculation and validity of the statistical linkage key can be found in the supplementary tables to the publication, *Disability support services: services provided under the National Disability Agreement 2016–17* (AIHW 2018), and in the associated [Disability Services National Minimum Data Set 2016–17; Quality Statement](#).

Indigenous status

For 2016–17, the proportion of all users of disability support services who identified as being Aboriginal and/or Torres Strait Islander people was higher than the proportion in the general population (5.8% versus 3.3%) (AIHW 2017). See *Disability support services: services provided under the National Disability Agreement 2016–17* (AIHW 2018) for further information.

Transition of NDA services users to the NDIS

Most existing NDA service users are expected to move to the NDIS over time, but not all will. Some people currently receiving services are not eligible to enter the NDIS (such as those aged 65 and over who are not already NDIS participants). While some specialist disability support services provided under the NDA and collected as part of the Disability Services NMDS will be rolled into the NDIS, other services (such as Disability Employment Services) will continue under the NDA once the NDIS is fully rolled out. See *Disability support services: services provided under the National Disability Agreement 2016–17* (AIHW 2018) for further information.

Data collected through the Disability Services NMDS from 2013–14 onwards are affected by the progressive introduction of the [National Disability Insurance Scheme \(NDIS\)](#). As a result, analysing trends in Disability Services NMDS data over time is complex; but decreases in those services moving to the NDIS, such as state and territory-provided services and Australian Government-supported employment services, are generally expected as the NDIS continues to roll out.

For the purposes of the Disability Services NMDS, once a service user has an approved NDIS plan and funding is available through the [National Disability Insurance Agency \(NDIA\)](#), they are considered to have transitioned to the NDIS and are no longer reported in the Disability Services NMDS from the date of their transition.

National Disability Insurance Scheme

The [National Disability Insurance Agency \(NDIA\)](#) is an independent statutory agency whose role is to implement the NDIS. The NDIA collects data pertaining to the NDIS and publishes online quarterly reports. More information can be found on the NDIS website (NDIA 2018).

Key Concepts

Key Concept	Description
Accommodation support	Accommodation support services provide the support needed to enable a person with a disability to remain in their existing accommodation or to move to more suitable or appropriate accommodation. It includes Large residential institutions, Small residential institutions, Hostels, Group homes, personal care by an attendant, in-home Accommodation support, alternative family placement (such as shared-care arrangements and host family placements) and other short-term one-off support such as crisis accommodation.
Australian Government-funded services	Australian Government-funded services include the National Disability Agreement (NDA) Employment services funded directly from the Australian Government.
Community access	Community access services are designed to provide opportunities for people with a disability to gain and use their abilities to enjoy their full potential for social independence. They include learning and life skills development, and recreation and holiday programs.
Community support	Community support services provide assistance with non-institutionalised living arrangements, such as specialised therapeutic care services, early childhood intervention, behaviour and/or specialist intervention, regional resource and support teams, counselling and case management.

Employment services	Employment services include open Employment services that provide assistance in obtaining and/or retaining paid employment in the open labour market and supported Employment services that provide employment opportunities and assistance to work in specialised and supported environments.
Group homes	Group homes provide combined accommodation and community-based residential support to people in a residential setting and are generally staffed 24 hours a day. Usually, no more than 6 service users are located in any one home.
Hostels	Hostels provide residential support in a setting of usually less than 20 beds and may or may not provide 24-hour residential support. Unlike residential facilities/institutions, Hostels do not provide segregated specialist services.
Large residential facilities/institutions	Large residential facilities/institutions provide 24-hour residential support in a setting of more than 20 beds. In some cases a range of residential and vocational/day services, and/or Respite services are provided on the one site.
National Disability Agreement (NDA)	<p>Originally signed by Australian Government and state and territory governments in January 2009 (replacing the previous Commonwealth State/Territory Disability Agreement), the National Disability Agreement articulates the roles of the governments in delivering specialist disability services. The agreement's overarching objective is to provide more opportunities for people with disability and their carers to participate in economic and social life (COAG 2012).</p> <p>A revised NDA was endorsed by COAG members in 2012. In addition to changes that reflect the new policy directions for community care in the National Health Reform Agreement, the revised NDA includes five new reform priorities. The priority areas for reform are aimed at building the evidence base for disability policies and strategies; enhancing family and carer capacity; strategies for increasing choice, control and self-directed decision-making; building innovative and flexible support models for people with high and complex needs; and developing employment opportunities for people with disability (COAG 2012; DSS 2012).</p>

National Disability Insurance Agency (NDIA)	The NDIA is an independent statutory agency whose role is to implement the National Disability Insurance Scheme (NDIS). The NDIA collects data on the NDIS and publishes quarterly reports.
National Disability Insurance Scheme (NDIS)	<p>The Australian Government announced the introduction of the NDIS in July 2012. The NDIS provides ‘reasonable and necessary supports’ to help people who have a ‘significant and permanent’ disability. The scheme is based on an insurance model, and each individual seeking access is assessed according to a common set of criteria. Individuals who are deemed eligible receive a package of funding to purchase the supports identified in their individualised plan.</p> <p>Because of the fundamental change to service provision, the NDIS is being rolled out in stages—trial sites began roll-out in July 2013, the full scheme roll-out began in July 2016 and state-wide roll-out started in July 2018. The NDIS is administered by the National Disability Insurance Agency (NDIA 2018).</p>
Non-residential support services	Non-residential support services are services that support people with a disability to live in a non-institutional setting through the provision of Community support, Community access, Accommodation support in the community (including personal care by an attendant, in-home Accommodation support, alternative family placement and other Accommodation support), respite and/or Employment services.
Other significant disability	<p>Disability refers to the impairment of body structures or functions, limitations in activities, or restrictions in participation.</p> <p>Other significant disability refers to disability group(s) other than that indicated as being ‘primary’ that also clearly expresses the experience of disability by a person and/or causes difficulty for the person. A number of other significant disabilities may be identified for each service user.</p>
Primary disability	<p>Disability refers to the impairment of body structures or functions, limitations in activities, or restrictions in participation.</p> <p>Primary disability is the disability group that most clearly expresses the experience of disability by a person, and causes the most difficulty for the person in their daily life.</p>

Psychiatric disability	Psychiatric disability within the Disability Services NMDS collection includes clinically recognisable symptoms and behaviour patterns frequently associated with distress that may impair functioning in normal social activity. Psychiatric disability may be associated with schizophrenia, affective disorders, anxiety disorders, addictive behaviours, personality disorders, stress, psychosis, depression and adjustment disorders, but dementias, specific learning disorders (such as attention deficit disorder) and autism are excluded.
Psychosocial disability	Psychosocial disability in the National Disability Insurance Scheme is a term used to describe a disability that may arise from a mental health issue. For a person with a psychosocial disability to access the Scheme, they need to have a permanent or likely-to-be permanent disability as a result of their mental health condition. The condition must have a significant impact on their day-to-day life and the person's ability to participate in the community. It also needs to be likely that the person will need support for the rest of their life (NDIA 2018).
Residential support services	Residential support services are services that provide accommodation for people with a disability. They include accommodation in large (>20 places) and small (7–20 places) residential facilities/institutions; Hostels; and Group homes (<7 places).
Respite services	Respite services provide a short-term and time-limited break for families and other voluntary caregivers of people with disability and include services such as those provided in the individual's home, in centres, in respite homes and with host families. Although respite is provided to both the person with disability and their caregiver, in this report the person with disability is regarded as the client, and numbers presented in the tables/figures reflect this definition.
Service type and service group	Service type and service group refer to the classification of services according to the support activity which the service provider is providing under the NDA. Service types are rolled into service groups for data relating to non-residential services.
Small residential facilities/ institutions	Small residential facilities/institutions provide 24-hour residential support in a setting of 7 to 20 beds. In some cases a range of residential and vocational/day services, and/or Respite services are provided on the one site.

State or territory administered services	State or territory administered services include those services providing any residential service and those providing the non-residential service groups of Accommodation support, Community support, Community access and respite. Joint funding of these agencies may occur between the state/territory and the Australian Government as specified by the NDA.
