Notes:

1. The population of this table is young people who first had juvenile justice supervision during 2000–01 while aged 10–14 years. The number of supervision periods experienced per young person is affected by how old each young person was at the start of the collection period. For example, young people aged 17 in 2000–01 could only accumulate supervision periods in 2000–01 and 2001–02 (in most jurisdictions). Young people aged 10 to 14 years in 2000–01 can accumulate supervision periods in all four years in most jurisdictions
2. Cells are not reported (n.r.) where N<5.

Notes

1. Episodes that began prior to 1 July 2000 are excluded from this table.
2. In this table, contiguous detention episodes of the same type that are separated by a transfer within detention are considered to be one episode and their length summed.
3. The use of the episode hierarchy may shorten or hide episodes that are lower on the hierarchy.
4. Cells are not reported (n.r.) where N<5.

Note: The population of this table is young people who first had juvenile justice supervision during 2000–01 while aged 10–14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000–01 could only accumulate supervision periods in 2000–01 and 2001–02 (in most jurisdictions). Young people aged 10 to 14 years in 2000–01 can accumulate supervision periods in all four years in most jurisdictions.

Note: The population of this table is young people who first had juvenile justice supervision during 2000–01 whilst aged 10–14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000–01 could only accumulate supervision periods in 2000–01 and 2001–02 (in most jurisdictions). Young people aged 10 to 14 years in 2000–01 can accumulate supervision periods in all four years in most jurisdictions.

Note: The population of this table is young people who first had juvenile justice supervision during 2000–01 whilst aged 10–14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000–01 could only accumulate supervision periods in 2000–01 and 2001–02 (in most jurisdictions). Young people aged 10 to 14 years in 2000–01 can accumulate supervision periods in all four years in most jurisdictions.

Note: The population of this table is young people who first had juvenile justice supervision during 2000-01 while aged 10-14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions.

Note: The population of this table is young people who first had juvenile justice supervision during 2000-01 whilst aged 10-14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000-01 could only accumulate supervision periods in 2000-01 and 2001-02 (in most jurisdictions). Young people aged 10 to 14 years in 2000-01 can accumulate supervision periods in all four years in most jurisdictions.

1. Age calculated as at entry to relevant *episode*.
2. *Episodes* that began prior to 1 July 2000 are excluded from this table.
3. In this table, contiguous detention *episodes* of the same type that are separated by a transfer within detention are considered to be one episode and their length summed.
4. The use of the episode hierarchy may shorten or hide *episodes* that are lower on the hierarchy.
5. Cells are not reported (n.r.) where N<5.

Note: The population of this table is young people who first had juvenile justice supervision during 2000–01 while aged 10–14 years. The number of supervision periods experienced per young person is affected by how old each client was at the start of the collection period. For example young people aged 17 in 2000–01 could only accumulate supervision periods in 2000–01 and 2001–02 (in most jurisdictions). Young people aged 10 to 14 years in 2000–01 can accumulate supervision periods in all four years in most jurisdictions
